Foreword

There are several different aspects to apple growing in the prairie provinces of Canada. These include cultural and propagation methods, breeding and selection, commercial and backyard management, the historical perspective, and today's choice of apples suited to this climatic region.

This publication is limited to edible rather than purely ornamental apples, and deals with only two or three slices of the apple pie. The main portion presented here supplies the names of apples and crabapples grown in the prairie region since the 1880s. More than 1000 names of apples and crabapples have been researched and included. Background information, wherever available, is also provided, intended to be of interest to specialists as well as to backyard growers who may come across an unfamiliar name.

Unlike an official registry of plant names, the present list is not restricted to apples and crabapples that have been officially registered, but is limited only to those grown (and likely fruited) in one or more of the three prairie provinces.

A brief history of the apple in prairie Canada serves as an introduction. One page of recommended apples and crabapples for this region is also included.

The author welcomes additions and corrections to the list, so that future editions might be expanded and enhanced.

Roger Vick
September 1991
Acknowledgements

Much of the information presented here is available thanks to apple enthusiasts such as the late Harold Fry, former editor of The Country Guide, Winnipeg. Fry was also editor of the Development of Horticulture on the Canadian Prairies, published in 1956 (and reprinted in 1986) by the Western Canadian Society for Horticulture.

Other sources of information include government and university bulletins, and reports of experimental stations. Recent updates have come from a number of present day growers, some of them with roots in the early years.

One of the objectives of this publication has been to record the personal opinions of apple growers, as well as historical dates and available descriptions. Any measure of success attained in this has been thanks to the input of keen growers throughout the region. If limited to mentioning less than a bushel of these cooperators I would have to include Gabor Botar at the University of Alberta; Brendan Casement and Thean Pheh at the Alberta Tree Nursery and Hort Centre, Edmonton; Art and Jim Coutts of Unity, Saskatchewan; Ieuau Evans of the Plant Industry Division of Alberta Agriculture; Bernie Nikolai of Edmonton; and Walter Manchester of Jarvie, Alberta. My thanks to these, and to the many others who have supplied information.

Recommended List

On the following page is a list of 25 of "the best" apples for this region. The list is extremely fluid, and will differ from one grower to another. Furthermore, almost any individual grower will modify his recommendations from year to year, based on the current season. Some growers like to retain old kinds that have stood the test of time, while others are more likely to relegate old ones to the obsolete pile and go with the new. For example, some would put Heyer #12 near the top of any list for its popularity, hardiness, drought resistance and productivity. Others say that it has long been superseded by similar apples that do not deteriorate as soon as ripe. (Here we have given Heyer #12 the benefit of the doubt and included it.)

Another element that enters into the equation of whether or not an apple cultivar is satisfactory in this region revolves around its treatment. Cultural methods vary from garden to garden. Also, while a borderline hardy tree on its own root will probably fail, the same cultivar grafted into a hardy and early dormant kind will usually do very well.

Fortunately for those of us who enjoy a challenge, the perfect apple, and the method of growing it in all parts of our region, is still being discovered.
Apples and Crabapples Recommended for the Prairie Provinces

1. Top Rated hardy apples and crabapples
2. Highly Recommended for most of the prairie region.

Legend
C=cooking; D=dessert; J=juice;
E=early; L=late;
K=keeping; P=preserving (canning);
H1=hariest; H2=moderately hardy; H3=borderline hardy;
ST=standard apples; CR=crabapples and applecrabs (less than 5cm dia.)

1. Top Rated
CR Dauphin E/P/H1 (Prolific, and mild flavor)
CR Garnet J/P/K/H1 (Hardy vigorous stembuilder)
ST Noran L/C/H1 (Hardy)
ST Norcuet E/D/H1 (Sweet dessert)
ST Norland D/C/H1-2 (Small tree)
ST Norson D/K/H1 (Late apple-crab)
ST Parkland D/C/K/H1 (All purpose)
ST Patterson C/D/J/K/H1 (Espalier potential)
CR Rescue D/J/H1 (A top rated juicer)
CR Rosybrook D/P/C/H1 (Crisp sweet apple-crab)

2. Highly Recommended
ST Brookland D/C/K/H2 (Fruit stands frosts)
ST Carroll E/D/H3 (A soft apple of mild pleasant flavor)
CR Columbia L/J/P/H1 (Seedlings are a frequent rootstock)
CR Dolgo J/P/H2 (Upright attractive tree)
ST Goodland L/C/K/H2 (Quality)
ST Haralson C/D/K/H2 (Store fruit for flavor)
ST Harcourt D/H2 (Flavor)
ST Heyer #12 C/H1 (Drought tolerant)
CR Kerr L/P/H2-3 (Fruit frost resistant)
ST Minnesota #447 D/K/H2-3 (Long keeping)
CR Ranetka (Compatible and vigorous rootstock)
CR Renown L/D/H1-2 (Sweet dessert crabapple)
CR Sylvia E/P/J/H1-2 (Very early, pale yellow fruit)
CR Trailman P/D/H1 (Fruit small. Flesh golden yellow)
ST Westland C/H2 (Large fruit, productive, self-thinning)
A History of Apples on the Prairies

In rather milder climates of North America where several species of wild apple grow as native plants, certain tribes of American Indians would gather the sour apples as they ripened, and bury them in the earth overwinter to tone down their astringency. On the Canadian prairies where wild apples were absent, however, the use of the apple awaited the settlement of the area by pioneers of European stock.

The first pioneers considered our area suitable only as ranch land, but the more enterprising were soon able to demonstrate that the harsh climate of the Canadian prairies was no handicap to producing quality field crops in abundance. As the basic necessities of life were attained the pioneers naturally looked to some of the finer things in life, and many growers considered that, if only they could establish orchards of a quality approaching those of southern Ontario and lowland British Columbia, then the land of cattle and wheat would indeed be a Garden of Eden.

Unfortunately the apple appeared to be a forbidden fruit in this climate, but this did not discourage some local entrepreneurs. As reported in the November 21, 1885 edition of the Edmonton Bulletin, 180 young apple trees were received by local plant agent G.A. Blake from the Warba Nurseries of Arnprior, Ontario.

It would take many seasons and a few extra long and bitterly cold test winters to convince the more optimistic local growers that most of the apple selections popular elsewhere were quite unreliable on the Canadian prairies. Only a few hardy crabapples could survive, and while they would suffice for jelly making, the reliable dessert and cooking apple had yet to be found.

The first introduction of larger crabapples can be traced from Russia to the eastern United States and then northwest to the prairie hinterland. The Massachusetts Horticultural Society imported the Russian 'Tetofsky' in 1835, a selection that was being grown and exhibited 40 years later in Manitoba. A few years later a number of other Russian selections were being tried in the territory that would become Saskatchewan and Alberta. These new introductions were considered better than nothing, but many settlers held the vision of an apple bred and selected for Canadian prairie conditions, combining the hardiness of a Siberian crabapple with the size and quality of a good standard apple.

(1) Slightly expanded from the article of the same name that appeared in the Friends of the U of A Devonian Botanic Garden newsletter Kinnikinnick, November, 1984.
The first Canadian to find himself in a position to seriously tackle the problem of discovering the perfect prairie apple was William Saunders. In 1886 Dr. Saunders was appointed first director of the new Experimental Farm System, and the following year imported seed of Malus baccata (the Siberian crabapple) from the Imperial Botanical Garden at St. Petersburg, Russia. The results of his initial breeding work, using the Siberian crab and the hardiest standard apples as parents, represent the first important advance in the quest for apples and edible crabapple to withstand prairie conditions. Remarkably, two of Saunders' first cross selections, 'Columbia' and 'Osman' are still considered good enough to be included in some of today's commercial listings. Here follows a record of the main highlights in the progress of prairie apple development.

1888 A Dominion Experimental Farm was established at Brandon, Manitoba, for the testing of thousands of apple seedlings for the prairies. (The site was later considered unsuitable for fruit testing, and was largely discontinued in 1915 with the establishment of the Morden station).

1890 Mr. A.P. Stevenson of Morden, Manitoba, imported many named apple selections from Russia through Professor J. L. Budd of Ames, Iowa. Some 34 of these were bearing fruit by 1902. He later supplied other pioneer nurserymen and by the 1920's produced commercial quantities of apples.

1894 Saunders began his apple breeding work using M. baccata and the hardier standard apples.

1901 At an exhibition of the Western Horticultural Society (forerunner of the Manitoba Horticultural Association) it is recorded that 47 different standard apples were exhibited, plus 26 different crabapples and hybrids. Since 1888 and the establishment of the Dominion Experimental Farm at Indian Head, Saskatchewan, it had been clearly demonstrated that shelterbelts greatly improve the chances of successfully establishing fruit trees and woody ornamentals. In 1901 a government program of free plants and seed was initiated for those wishing to establish shelterbelt plantings.

1904 Saunders began re-crossing his first-cross selections back to standard apples. Of Saunders' "second crosses" the most notable offspring are 'Trail' and 'Rosilda'.

1905 Orchards were established in Alberta at Clover Bar, (just east of Edmonton) Vermillion, Kitscoty (just east of Vermillion) and Wetaskiwin. The most vigorous and praised crabapple of those days was 'Transcendent.'
1906 Fireblight was first noticed in Manitoba. Sporadic and virtually uncontrollable outbreaks of the disease occurred throughout the prairies in subsequent years.

1908 The first apple introductions from Indian Head were announced. These were two selections originating in Russia, 'Hibernal' and 'Simbirsk.' Also in 1908 an orchard was established at the Dominion Experimental Farm, Lethbridge, Alberta. The most frequent recommendations from this planting were for 'Osman' crabapple and 'Moscow Pear' apple.

1909 Adolph Heyer of Neville, Saskatchewan commenced his plantings of all known varieties of apples having a reasonable degree of hardiness. He then started growing seed of open pollinated apples from A.P. Stevenson, and he was among the first to attempt the selection of the better adapted ones. His 'Heyer 12' is still offered commercially and remains one of the standards against which new introductions are measured.

1910 Professor W.T. Macoun, successor to Saunders, began raising seedlings of Russian and other potentially hardy apples at the Central Experimental Farm, Ottawa. Of some 25,000 seedlings originally on trial, 18 were subsequently named and introduced.

1911 The first apple plantings were made at the Experimental Farm, Scott, Saskatchewan. There were 42 different kinds on test.

1914 Dr. Seager Wheeler, the renowned grain farmer and wheat king of Rosthern, Saskatchewan, began his fruit plantings. This led to his extensive testing, hybridizing and distribution of apple and crabapple selections.

1916 The winter of 1915-16 proved to be a "test winter," with disastrous results to many orchards on the prairies. Only the very hardiest selections survived, and the value of shelterbelts was again clearly demonstrated.

1920s Until his untimely death in 1935, Mr. George F. Chipman of Winnipeg, editor of the Grain Growers Guide (now the Country Guide) gathered and disseminated information on apple growing, and distributed thousands of seedlings and quantities of hybrid apple seed for trial. A number of useful cultivars were thus introduced.

1929 The Morden Experimental Farm released its first apple introductions, 'Mantet, 'Manton' and 'Mortof.'
1930s Mass growing of apple seedlings by private individuals with small orchards led to a large number of named apples, many quite unworthy of introduction.

1943 An early fall frost followed by a severe test winter (1942-43) again wiped out much of the imagined progress toward production of an ultimate prairie apple. This setback resulted in a thorough re-evaluation of the various fruit breeding and testing programs being continued simultaneously by the federal, provincial and university research facilities. This study resulted in the formation of the Prairie Fruit Breeding Co-operative.

1949 The Western Canadian Society for Horticulture urged all its members to check first with the Society, or with a registration authority before applying a new "varietal" (cultivar) name to an apple seedling. The official experimental stations avoided the use of names altogether until an apple selection had finally been approved for introduction, conducting their tests under a system of letters and numbers.

1950s The Prairie Fruit Breeding Co-operative operating from the Morden Research Centre, produced about 130,000 controlled cross seedlings of apples during the decade of the 1950s. They were distributed to several co-operating test stations, where they were maintained and evaluated. Initial enthusiasm ran high, but the project commenced a serious decline before the end of the decade.

1960s Federal government support of horticulture at its prairie research stations slowed, and available funds were concentrated almost exclusively on agricultural research, and a few vegetables. For the apple program already in progress in the 1960s the general aim was to select superior seedlings, with the emphasis on apples of 5cm and larger. A total of 52 selections were chosen for a second test. The three testing stations being Morden, Manitoba; Melfort, Saskatchewan (southeast of Prince Albert); and the Provincial Horticultural Station at Brooks, Alberta.

1970s Some of the hybridizing work of 20 years earlier resulted in a few new introductions in the mid to late 1970s. 'Trailman' was one of the first of this new generation, (released by the Beaverlodge Research Station). This was followed by 'Noran' and five other in the "Nor" series.

1980s While the number of new apples specifically developed for prairie Canada were few (perhaps awaiting a promised plant patent act in this country) consideration was being given to topworking superior but borderline hardy cultivars onto hardy stembuilders and dwarfing rootstocks.
With the advent of Plant Breeders Rights legislation (receiving Royal Assent in June 1990), the prospects were improved for the release of a number of superior apples developed on the prairies for prairie conditions. Also, a number of commercial quality apples were being grown, developed for milder climates, but inheriting hardy genes.

Reviewing the above outline it is evident that a kind of "applemania" took hold of the prairie region, starting in the 1920s and continuing through the hard years of the 1930s until the Second World War.

The 1920s brought results from government experimental farms, encouraging private individuals with some land, time and optimism to raise apple seedlings by the hundreds or thousands. Some people made controlled crosses by hand pollination. Most, however, raised seedlings or grew the seed distributed through the County Guide. Others just sowed the seed saved from store bought apples.

In those days the aspirations of the people were popularly expressed as slogans, and one that was particularly inspiring was the "Search for the Million Dollar Apple." No one said that it would be easily found.

The wonder apple of their vision would not only stand the long and harsh prairie winters without suffering dieback, but would have to approach the size of a commercial apple, have good texture, a flavour acceptable for dessert or cooking (preferably both) and possess good keeping qualities. The tree would show vigour, disease resistance and be of good form and structural strength. It would fruit at an early age, and continue to bear a heavy annual crop without over-production that would necessitate thinning.

The chance of finding this paragon of pomes was more remote than winning the Irish sweepstakes, yet the search continued with almost frenzied zeal. Government experimental farms and university research institutions in the three prairie provinces and northwestern United States all played the game, spending large sums of money and countless hours in search.

A key figure in the development of the prairie apple in the northern U.S.A. was Dr. N.E. Hansen. In a 1927 bulletin he announced his belief that the breeding of a hardy apple for the northwestern prairie states was the most important fruit project of the region. By that time fully 10,000 apple seedlings had been grown along "various lines of pedigree" in the step by step evolution toward the ideal apple.

In spite of the earlier work performed by hundreds or orchardists in the northern Mississippi valley and elsewhere, Hansen decided to start his own line of apple breeding, using M. baccata the
Siberian crabapple, and what was probably M. ioensis the hardiest wild crabapple of the United States. He thus abandoned the apple cultivars of western European ancestry tried by hundreds of previous orchardists of his area without much success. He used the cultivar 'Wealthy' as the minimum standard against which his new seedlings would be evaluated, but agreed to lower the standard slightly if an apple of long winter keeping quality could be found.

Sometimes, despite the odds, it was the private individual with limited resources (like Adolph Heyer) that came up with a winner. Throughout the 1930s private individuals with small orchards made their own selections. Their limited collections frequently lacked the best kinds available, so it was hardly surprising that the grower was likely to discover that one of his own selections was, in some respect, superior to anything else in his orchard.

Each new "superior" apple would be hastily named by the grower, usually with no other testing than that of the originator, and a strong possibility that a particular name would sooner or later be applied to more than one apple selection. The result was widespread confusion.

Good nurserymen soon learned to offer for sale only established apple cultivars, and kept in touch with government research stations for the results of the prairie apple trials.

Soon the proliferation of unregistered names became a major headache for the research personnel who were expected to assess the value of named apples. For several years the various government and university testing centres were kept busy running the multitude of named cultivars through their trials and, in most cases, promptly discarding them as wanting.

After the Second World War the impetus for the search had diminished, and it was generally considered that fruit growing should be left to the milder regions of the country. In short, it was far easier to ship apples into the prairie market than to attempt to establish commercial orchards on the prairies.

Even so, at the beginning of the decade of the 1950s interest in the Prairie Fruit Breeding Co-operative was high, with the research station at Morden, and the Universities of Saskatchewan and Alberta as the three key testing stations. There were still fifteen prairie stations reporting on fruit breeding in 1951, but by the middle of the decade enthusiasm declined. Co-operating stations no longer had the space nor the budgets to maintain ever increasing orchard plantings, and the controlled cross seedlings piled up at Morden with nowhere to go.

continued...
In 1956-57 a number of key personnel either retired or moved from the co-operating stations, and Dr. Wilbert G. Ronald (looking back at that situation in 1978) stated... "This period (1956-57) marked the start of the horticultural staff erosion at the federal stations, a continuing factor to this day."

While that situation has not changed as we reach the 1990s, an ongoing interest in fruit growing is very evident in the general population.

The million dollar apple may not be just around the corner, but good steps have been made in the right direction. Aside from the increasing interest in good quality apples for the small home garden, the current concern over energy and the increasing costs of transportation may start renewed interest in selecting an apple that will have commercial application for the prairie provinces.
Abbot (Eliza M Helba) Patterson (1960) CR
Fruit 5cm (or smaller) blushed over yellow.

Acheson (Delicious sdlg) J.H. Acheson/UA (1941) ST
Fruit large, greenish, ovate, sub-acid, fine texture, ripens late August.

Adair (Delicious sdlg) Mrs S. Adair, Outram SK 1953 ST
Fruit greenish yellow. Ripens late August to early September.

Adam (Red Siberian sdlg) Bougen (1936) CR
Fruit 3cm, bright red, flesh slightly dry, astringent, biennial bearing.

Adanac (Battleford sdlg) Lloyd of Adanac, SK (1960) ST
Fruit 5cm, light green, light red cheek. Soft flesh, good for pies, fair keeper.
Bears at a young age. Was known locally as Jack's No. 1 before Lloyd released it as Adanac. "Obsolete" notes Coutts. Ref Smithfield. FB2 H2.

Adno (Russian origin) Hansen (1916) ST
Fruit red, sub-acid. Productive but late. Adno is Russian for "one," a provisional name applied by the Brookings station, SD.
Rosthern test (1930s). H3.

Adonis (Wealthy sdlg) CEF (1905) M.B. Davis ST
Ref Smithfield.

Adrienne (Battleford X Heyer 12) Wright (?)
(Not to be confused with Adrienne listed by Smithfield, syn Johnson's Fine Winter.)

Advance (Columbia X Wealthy) Patterson (1959) ST
Fruit keeps about 5 days.
Good flavor. FB3 H1. (Not to be confused with the Advance raised by Laxton Bros. of Bedford, England in 1908.)

Aker's Special (unknown) ST
Fruit 6cm, green with some blushing and striping. FB3.

Albert (Winter St. Lawrence sdlg) CEF (1912) M.B. Davis ST
Fruit deep red and yellow.

Alberta (baccata X Hass sdlg) CEF Saunders CR
Fruit 4cm, red-striped when mature.
Edible when skin still whitish; very tender, juicy and sweet with pleasant delicate flavor. Rosthern test 1930s. H1.

Aldenhorn CR
Fruit 4cm, greenish-yellow with red cheek. Astringent. Quality fair. FB3 H2
(Syn M. purpurea var. aldenhamensis.)

Alexander ST
Fruit 8.5cm, pale yellow, flushed and mottled bright scarlet.
Very greasy if stored. Dual purpose. Known in the 1700s. Ref BHB, Smithfield. (Syn Emperor Alexander.)
Alexis (robusta sdlg)  Hansen (1919)  
Fruit 3cm, bright red. Flesh yellow, acid, good for jelly. Does not store well. 
Was raised from seed obtained in 1897 from St. Petersburg. 
Similar to Dolgo. Tested at Rosthorn 1930s. H1-2.

Algod (see Harcourt)

Alice (op sdlg)  Dalke, (c.1984)  

Allison (Dr Bill sdlg?)  Wright (1980)  
Fruit yellow. 
Of the small 'Delicious' type. (Named for Wright's daughter.)

Allgood (see Harcourt)

Alma (nied hybrid)  Hansen (1941)  
Fruit 6cm, dark dullish red. 
Fleshy juicy, rosy red, somewhat coarse, dessert. 

Alma Sweet  Erskine  
Fruit sweet and a favorite with children. J. Coutts obtained this from Erskine about 1978. H1.

Almey (baccata X nied)  CEF (1945)  
Fruit 2cm, maroon scarlet long-oval. 
Ornamental, but also used for jelly. 

Alred (Hopa sdlg)  Brooks (1937)  

Altgold (baccata X Rosilda)  Wm. Salamandyck, Red Deer AB  
Fruit 4cm, golden. Midseason. 
Does not keep well. Trees bear at an early age. 
Released by Honeywood Nursery.

Ames 550 (Brier X Mercer)  Iowa Agr Exploration Stn. (1928)  

Amsib (ionensis X baccata)  Hansen (1932)  
Fruit 3cm, bright red. Keeps well. 
Name coined from "America" and "Siberia." The female parent was a wild Iowa selection (possibly a hybrid). The baccata was from seed brought by Hansen from Moscow in 1906. Ref NAC p.26.

Amur (robusta sdlg)  Hansen (1912)  
Fruit 3cm, red. Tree with spreading habit. Named for the Amur River region of Siberia. Not to be confused with Amur Red. H2.

Amur Red (Amur sdlg?)  Orchard (c.1940)  
Fruit 3-4cm, dark crimson, in tight clusters. Consistent moderate cropper from an early age. Excellent canning and jelly. Tree with upright habit. H1.
Anaros (Antonovka sdlg) Rosthern (1936) CR
FRUIT 3.5cm, orange. Flesh yellow.
Ripens early Sept., but will not keep in storage.
Good for canning and jelly. Vigorous. Used as a stem builder.
"About the healthiest and hardiest crab grown... tree is about the best here for overbudding" Lloyd.
Formerly Rosthern #2. "Was good in the 1930s. Like Mecca, but no FB." says Coutts. Ref Smithfield. FB1-2 H1.

Andersen (Columbia X Melba) Patterson (1960) CR
FRUIT 4.5cm, dark red
on light ground. Mid season. Thinning does little to increase apple size. Fair quality. H1.

Angus (Dean X Ontario) Saunders (1913) ST
FRUIT 5-6cm, pale yellow, washed dull crimson. Flesh yellow, fair quality.
Late. Rosthern test 1930s. Ref WCHS, L&U. H3.

Anig (Old Russian cv) Saunders (1888) ST
FRUIT small to medium, pale-yellow washed red. Quality fair to good.
A strong stembuilder, in spite of narrow crotches.
Tends to be dwarfing. Collar rot. Ref WCHS 65, HG 40s, L&U H3.

Anisette (Old Russian cv) ST

Anisim Rosthern test 1930s. H3.

Ann Trio (Tony X Mercer) Hansen (1938) CR
FRUIT 3cm, red. Tree productive and spreading. Ref F&N.

Annanton Ref CGS.

Annonoura Ref CGS (Brooks).

Anoka (op sdlg of Mercer grafted on Duch. of Oldnbg.) Hansen (1918) ST
FRUIT 6cm, red. Subacid.
Productive. Bears at an early age, but of poor quality.
Rosthern test 1930s. Offered by Lacombe Nursery 1936. Anoka is a "fun" name on word "on both sides." Manchester notes... "Bears on previous year's new growth." Hansen Bull 224-1927. Ref F&N, L&U. H3.

Anson (Winter St. Lawrence sdlg) CEF (1910) ?
Ref Smithfield.

Antonovka (Old Russian cv) ST
FRUIT large, 8cm? Pale yellow, ribbed. Irregular. One of the standard cvs in the colder parts of the USSR. Has been used on the Canadian prairies as a stem-builder. Vigorous. Good for sauce.
Rosthern test 1930s. Ref Smithfield. FB3 H3? (Many synonyms.)

Arabka (see Charlamoff)

Arabskoe (mied.) CR
Skinners Nursery.

Arastaa Finland ST
FRUIT up to 5.2cm, greenish-yellow well washed and striped red. "An excellent canner and fair little dessert apple" according to Beaverlodge Nursery, who introduced it from Finland c.1953. Ref B' lodge Nursery cat. (1968).
Arctic Dawn (nied. hybrid)  Beaverlodge (1952)  CR
    Fruit 1.2cm, purple red.
    Not edible, but included here for
    its possible use as a hardy rootstock.

Arctic Red (Osman sdlg)  Beaverlodge (Wallace pl. c. 1928)  CR
    Fruit 3-5cm, purple-red.
    Flesh golden, crisp, aromatic. Keeps till November.
    Jelly superior to Dolgo. Ornamental registered with COPF.

Arlene (Seed from USSR)  Zalizniak (c. 1945)  ST

Arnold's Prairie Queen  Ref J. Coutts.

Aroma (Florence sdlg)  Robinson (1940)  CR
    Fruit dark red striping.

Arundel  Ref CGS (Brooks), L&U.  ?

Arvida (unknown)  John Letawsky, Lamont, AB (1945)  ST

Ascot (Northern Spy sdlg)  CEF (1913) W.T. Macoun  ?
    Fruit crimson. Late. Ref Smithfield.

Astrachan  Sweden (prior to 1816)  ST
    Fruit early and tasty. Doesn't keep.
    A.W. Coutts notes: an early summer apple of high color and
    of little commercial value. Canker. Not hardy enough for the
    Unity district of Sask., although both A.W. and J. Coutts have it
    in their orchards. Not to be confused with Red Astrachan, q.v.
    Ref BHB. H3.

Astrachan White  Skinner's cat. (1947).  ST

Athabasca (nied. hyb)  Preston (1933)  CR
    Fruit 3cm, bright red and yellow.
    Jelly. H1.

Atlantic  FB2.

Atlas (Winter St Lawrence sdlg) CEF Ottawa (1912) intro. 1924  ST
    Fruit above medium size,
    pale yellow, washed and striped orange-red.
    Good quality, productive. Requires no thinning.

August (Wealthy sdlg.)  Minnesota  CR
    Ref Maurer, PSM.

Aurora (baccata X Tetofsky)  CEF  ?
    Ref Smithfield.

Baccata (syn for Malus baccata)  CEF  ?

Bancroft (Forest X McIntosn)  CEF (1930) intro. c. 1935  ST
    Fruit 7cm, dull red. Hard. Fair quality.
    Ripens mid-October. At its best after Christmas, and will keep
    until spring. "A very particular and aromatic flavor."
    Ref BHB, Smithfield. (Syn Bankcroft.)

Bank (baccata X Tetofsky)  CEF  ?
    Ref Smithfield.

Baraboo  B.B. Brier, Baraboo, Wisconsin (1870s?)  ST
    Ref EGS (Morden).

Baron (see Red Baron)
Barrie (Columbia X Wealthy)  Patterson (1950) int. 1960  ST
Fruit 5cm, cream/light red. Mid season.
Of doubtful quality. Coarse yellow flesh,
some cracking and heavy russet in cavity.
Doesn't keep. Ref F&N, Smithfield. (Syn James Barrie.)

Battle (Wealthy sdg)  CEF (1910) M.B. Davis
Ref Smithfield.

Battleford (Russian origin)  Murray Sommerville (1934)
Fruit 7cm, pale green, striped
red, with bloom. Flesh white coarse and crisp,
slightly tart. Will bruise from early summer haul.
Good dessert, fair cooking and keeping. Moderate yield.
Not dependably productive. A standard against which new apples
have been evaluated. Note: Lloyd released Battleford in 1940
as Battleford No. 1. "Obsolete" says Coultts, "Susceptible to FB.
Good breeder." FB3 H2.

Battleford Crab  CR
Ref CGS.

Battleford Russet  ?
Ref CGS.

Bayfield  ST
Ref CGS (Brooks).

Beacon (Malinda X Wealthy)  Excelsior (intro 1936)
Fruit 8cm, yellowish.
Heavily washed deep red. Skin thick and tough.
Ripens unevenly. Productive, but a tendency to biennial bearing.
Formerly Minn. #423. Ref Prairie Moon, F&N, L&U. FB2 H2-3 SCL.
(Syn Early Delicious.)

Beautiful Arcade (see Repka Kisilaga)
(Also the name of an ornamental pollinator
in USA.)

Beauty (baccata sdg)  Hansen (1919) intro c. 1929  CR
Fruit 4cm, cherry red. Productive,
and keeps until January. Has been used for topworking.

Beauty Blush (Elsa X Wealthy)  Patterson (1947) intro 1960
Fruit 4.5cm, yellow, slightly blushed.
Coarse flesh. Mid season. Tends to drop prematurely. Jelly. Ref F&N.

Beauty of Montreal (see Montreal Beauty)

Beda  CR
Rosthorn test 1930s. Ref CGS (Brooks and Morden). H3.

Bedford (Cluster sdg)  Brandon (1916)
Fruit 3cm, yellow, heavily washed
dull red. Good quality. Tends to overbearing
in favorable seasons, resulting in smaller fruit.
Formerly used as a rootstock, but now largely superseded
by Columbia for this. Valuable for topworking. Named for the
first Supt. of the Brandon Experimental Farm, S.A. Bedford.
Note: Flowered and fruited for the first time in 1916.
Ref Smithfield, WCSH, L&U. FB1 H2.

Beforest (Forest sdg)  CEF (1925)
Ref. Smithfield.

Ben (see South Dakota Ben)

Ben Davis
"Replaced by Black Ben" says
Ref Starkes cat., CGS (Morden). (Syn Baltimore Pippen.)
Ben Trio (Progress X Mercer) Hansen (intro 1938) CR
Fruit 3.5cm, dark red. Good yield, good cooking. Ref CGS (Morden), F&N.

Bernard Saunders CR
Ref CGS (Brooks). H3.

Bethel ST
Fruit 7cm, yellowish skin, heavily striped and mottled with dark, dull red. Flesh yellow, coarse, firm. Baking or dessert. Bruises easily, but with care will keep till February. Zone 3-4. Ref BHB.

Bibby Richard Bibby, Edmonton, AB (1962) ST
Fruit 8cm, with or without light red striping. Fair dessert, but excellent baking. Coutts notes... probably a good replacement for Luke in some areas. Early. Original tree still at 9716-84 Avenue, Edmtn. in 1981. The tree originated from a store bought apple seed planted in a pot with a houseplant about 1930. It was eventually planted out by the Little family. When the house and lot was purchased by Mr Bibby in 1934, he decided to let the seedling grow to maturity. FBI H2-3.

Big Silver CR
Ref CGS (Morden).

Bingley Andrew Sande ST
Ref Erskine. H1-2.

Bingo (Northern Spy sdlg) CEF (1911)
Fruit crimson. Late. Ref CGS (Morden), Smithfield.

Bismarck (Bismarck X Mercer) Hansen (intro 1927)
Fruit 6cm, light yellow with brownish-red. Bears when young. Sauce. Ref CGS (Morden), F&N.

Bison (Jonathan X Sylvia) Hansen, Brookings CR
Ref Hansen -- bull #309 (1937), CGS (Morden).

Black Ben ST
Probably a descendant of Ben Davis says Manchester.

Black Oxford FB3.

Blanche (op of Russian origin) Maison CR
Fruit yellow/red. Ref Smithfield.

Blenheim Orange Kempster, Blenheim, Oxford c.1740 ST
Fruit 8.5cm, greenish yellow, becoming yellow. Ref CGS (Brooks).

Blush (Anoka sdlg) Boughen (1945) intro 1950 CR
Fruit blushed. Sweet flavor. Ref F&N.

Blushed Calville (Russian origin) ST

Bode (Russian origin) ST
Fruit "above medium size," pale yellow. Mild flavor, quality fair to good. Ref CGS (Morden), L&A. FB2.

Bogdanoff (Bogendoff) CR
Ref CGS (Morden).
Bonda (seed from the Ukraine) Fedun (1940)

Bonun (seed from the Ukraine) Fedun (1940)

Bona (see South Dakota Bona)
Ref CGS (Morden).

Borovytsk (see Duchess of Oldenburg)

Borowinka (see Duchess of Oldenburg)
Ref Maurer, PSM.

Boskill #2
Good parent for hardiness.
Frank Boskill of Rutland SK grew apple seedlings in the 1920s. In about 1933, propagating material of #2 passed to the Coutts family of Unity, and in the 1950s was used in the breeding work of A.W. Coutts. (See also Rebo.)
Note: Boskill #3 was described as a pear-apple. Lloyd called Boskill #4 "The Prairie Tolman Sweet." Ref J.Coutts.

Bottle Greening (see Pow)
The name Bottle Greening was applied to a mystery apple for several years. The true Bottle Greening, however, was not hardy enough for prairie trials.

Boughen's Delight (unknown) Boughen (c.1940)
Fruit 3.5cm, orange and red.
Jelly. Ref F & N, Smithfield. (Syn Delite.)

Bow
Saunders
Ref CGS.

Bowyer #14 (unknown) Mrs W.R Bowyer, Prince George (1935) ST
Fruit 6cm, green washed with bright red. Skinner intro (1950)
Ripens 3rd week of Sept at Prince George.
Selected by Bowyer from seed supplied by Chipman.

Braebest (unknown) R.M. Wilson, Gladstone, MB (1955) ST
Fruit 6cm, yellow ground, washed and striped red.
Of fair quality. Cooking and freezing. Originally noted at Mr. Wilson's Braeburn Farm, as understock of material received from Morden. FB3 H1-2.

Brands Imperial
Ref CGS (Morden).

Brands Winter
Ref CGS.

Brantford
Ref CGS.

Breakey (Blushed Calville sdig) Morden (1929, intro 1936)
Fruit 5cm, yellowish green, striped bright red.
Late. Good dessert, good cooking. Keeps well.
Tendency to drop fruit easily. Ref Smithfield, L&U. FB2 H1.

Brereton (op) Orchard
Tested at Morden 1949.

Brier
B.B. Brier, Baraboo, Wisconsin (1870) CR
Fruit 4cm, red-yellow. Ref PSM.

Brightholm #3 (op Rosilda sdig) James Barrie, Brightholm SK.

Brightness (Columbia X Wealthy) Patterson intro 1959
Fruit about 4cm, bright red. Early.
The coarse flesh browns easily. Acid flavor.
Brock
Ref CGS (Morden).

Brod (seed from the Ukraine) Fedun (1940)

Brookland (Heyer(12 X Haralson) Brooks (1980)
Fruit 5-6cm, green with light red blush. White flesh fairly resistant
to browning. Dessert and cooking. Keeps about 6 weeks.
Manchester notes... "best topworked on a hardy rootstock.
Fruit stands heavy frost." Casement notes... "There are better
apples, but this is hardy in Calgary." (Tested as PF 1.)

Brooks Beauty
A.L. Young, Brooks, Alta. (1936) ST
Note: this name was also used for a 1934 intro by Bert Brooks, Lafayette Nursery.

Brooks #9 (Dolgo sdlg) Brooks CR
Late fruiting.

Brooks #10 (Dolgo sdlg) Brooks (1939) CR
Fruit about 5cm, green washed with red. Late, but yield and

Brooks #14 (unknown) Brooks CR
Late fruiting.

Brooks #22 Brooks CR

Brooks #23 Brooks CR
Midseason, good yield and quality. Jelly.

Brooks #27 (unknown) Brooks (1937) D. Bark ST
Fruit 6cm green with red over-lay.
Good dessert. Keeps well. Fair vigor.
Hort Guide. "Poor quality and too tender" says Coutts.

Brooks #135 Brooks CR
Yield and quality good. Dessert and canning.

Brooks #188 Brooks CR

Bruce UA (1947) ST

Bruno (Scott Winter sdlg) CEF (1908) M.B. Davis ST
Planted at Scott (1911).

Burgundy (Monroe X NY18491) ST
Fruit dark red, midseason
High quality dessert apple of good size.
Hangs well. Vigorous. Annual bearer.
Ref Manchester. H2.

Burns McIntosh ST
Ref CGS (Brooks).

Cabin (op) Orchard. Morden (1949) ST
Ref L&U.

Caddy (op) Orchard. Morden (1949) ST
Ref L&U.

Cadet (McIntosh sdlg) A. Spangelo. Morden ST

Cairns ST
Ref CGS (Brooks). H2.
Cal Trio (Mercer X Sweet Russet) Hansen (1938) CR
Fruit 4cm, yellow-red.

Calros (Blushed Calville std) Rosthern (1934) CR
Fruit 4cm, yellow and crimson.
Calyx protrudes and persists.
Flesh yellow, fair quality.
Ripens early September, and keeps till November.
Named from CALville and ROSThern. Ref FAN, L&U. FB3 H1.
(Tested as Rosthern #1.)

Calta (unknown) I.C. Flick, Calgary, AB (1946) ST
Ref L&U.

Calville White Skinner to Beaverlodge in 1945 ST
Raised in Europe, world wide distribution.
Recorded 1598. "Seldom ripens properly in England."

Calvin Orchard ST

Canada Hardy Harrison (1953) ?
Fruit light green. Ref Smithfield.

Cansark Ref CGS. ST

Capobiens Ref CGS (Morden). ?

Caramel (unknown) Hansen (1919) CR
Also TSited as "Caramel."
Fruit 4cm, orange-red. Named for its sweet flavor.
Rosthern test 1930s (as Carmel Sweet.) Ref CGS (Morden). FB1 H3.

Cardinal N. Pankiw, Dufrost, MB (1936) CR
Seed from the Ukraine.
Note: this name also applied to an ornamental intro by Richard Wellington, Geneva NY.

Carleton (baccata X Wealthy) CEF ?
Ref Smithfield.

Carlos Queen (unknown) Erskine (1972) ST
Fruit 7.5cm, green with a slight blush. Good dessert, cooking and keeping.

Carlton Rosthern test 1930s. H3.
Ref Manchester.
Note: two different apples have been grown under this name.
See also Carleton.

Carmel (see Caramel)

Carolina Red June (see Red June)

Carroll (Moscow Pear std X Melba) Morden (1961) C.R Ure ST
Fruit 6-7cm pale green, mottled and streaked rosy red. Texture soft to very soft.
Flavor mild, good dessert. Good sauce and apple pies.
Ripens Sept 1, and keeps 2-3 months. Good branch structure.

Carter H3.

Caruso (McIntosh std) CEF (1912) M.B. Davis ST
Ref Smithfield.
Casco (McIntosh sdg) CEF (1914) M.B. Davis
Ref Smithfield.

Cathay (prunifolia rinkii hyb.) Hansen (1919)
Fruit 4cm, yellow with orange blash. Makes light yellow acid sauce of good flavor.
Named for China. Ref CGS (Brooks).

Centennial Excelsior (1957)
Fruit 4cm striped. Dessert.
Tends to biennial bearing.
Ref F&N. (Tested as Minnesota #1472.)

Chabana Tested at Scott (1911)

Chance (unknown) Hansen (1919)
Fruit red-striped with blue bloom.
Late. A chance seedling from northern grown apples.
Ref CGS (Brooks).

Charlamoff and Charlamowsky (see Duchess of Oldenburg)

Charles (baccata X Tetofsky) Saunders, Indian Head, SK (1908)
Fruit yellow, productive, good flavor.
Ripens early Sept. "Attractive preserve."
Ref Skinner's cat 1938. FB3 H1-2.

Charles X Duchess
A useful stembuilder. Vigorous,
with very wide angled crotches,
strong and well spaced branches. (Tested as CC-14-45.)

Charles X Tetofsky
Ref CGS (Brooks).

Chenango Strawberry (Syn. Cherngous, Chernogous,
Zephurus Chernogous, and Sherwood's Favorite)
Ref CGS (Brooks), Smithfield, ME.

Chestnut (Malinda sdg) U of Minn. (1921, intro 1946)
Fruit 4.5cm, reddish bronze,
distinctive nutty flavor. Excellent dessert.
(Syn Minnesota #240.)

Childe Saunders
Ref CGS (Morden).

Chinook (Baiwin X loensis 'Elk River') Hansen (1924)
Fruit 5cm, dark red. Keeper.
Named for an Indian tribe. Ref CGS (Brooks and Morden).

Chipman (Columbia X Melba) Patterson 1944, (intro 1960)
Fruit 6cm, red wash. Same shape
and flavor as Delicious. Matures well
into October, but stands frost better than others.
Dessert and keeper. "Probably worthy of more extensive
trial" says Manchester. Ref F&N. H1.
(Syn George C. Chipman.)

Choate
Ref CGS (Brooks).
Could be a typographical error for Choka

Choka (loensis X Alexander) Hansen (1922)
Fruit 4cm, green with very firm
flesh. Vigorous. Ref F&N (Listed in Wyman as Shoko.)
Christmas Red (unknown) Lloyd 1950 (intro 1960) ST
Fruit 5.2 cm, highly colored red blush.
Keeper and good dessert. Lloyd was testing material
from Morden, but lost the name of this one. He thought
that it made a nice ornament at Christmas time.

Cinnamon Pine
Ref PSM ST

Claire (unknown Russian sdlg) CEF (1906) M.B. Davis
Planted at Scott 1911. Ref APS. (Syn Eric.) ?

Clive (Welshy sdlg) CEF (1908)
Planted at Scott 1911. Ref Smithfield. ?

Close (unknown) C.P. Close, USDA Arlington Va. (1925)
Dessert and cooking. (Intro 1938) ST
Strong grower, tight annual cropper.
Good sauce, but fresh fruit acid. Ripens late July.
Ref Smithfield, CSG (Brooks & Morden).
(Syn Red Transparent.)

Coleman (op) Orchard, from Coleman Miami, MB CR
Tested at Morden (1949).
Not recommended for Alberta (WCSH 1955). Ref LBU. H1.

Collet (unknown) Collet. Intro by Morden (1961) ST
Fruit 6.5 cm, greenish cream,
uniformly streaked with bright medium red.
Good cooking and excellent dessert. Resembles Godfrey.
Selected c. 1940 by Victor G. Collet from a group of op sdlgs.
The apple received an Award of Merit from WCSH in 1978.
"Don’t harvest too early" says Evans, "as frost triggers release
of sugars." Fruits turn rose-pink when ripe, generally in early
October, and will stand 5 - 10 degrees F of frost. "Pick green,
ripens in storage" says Sprout. Keeps about 10 weeks. "Good but
too tender" says Coutts. Ref Smithfield. FB1 H2.

Columbia (baccata X Broad Green) Saunders (1911) CR
Fruit 3-4 cm, pale green, well washed
with red. Thick skin, yield fair, quality good.
Late ripening. Used as a rootstock for prairies.
Jelly. Ornamental. Not good as a stamnbuilder due to
tendency to split. One of the best and hardiest of the
orignal Saunders hybrids. Manchester notes..."Frts highly
frost resistant. Dependably hardy and disease resistant. Still
well worth growing in home gardens. Excellent juice and jelly,
canned and sauce, but too sour for eating raw." Erskine rec. FB1 H1.

Connell Red (Fireside bud mutation) Wm F. Connell, Wis (1957) ST
Fruit 7.5 cm, red. Dessert
with flavor like Red Delicious. Late. Keeps until April. SC1.
(Syn Connell and Connell Fireside.) H2.

Cooking A
Tested at Morden 1949.

Cora
Rosthern test 1930s. H3

Cortland (Ben Davis X McIntosh) Geneva (1915) ST
Fruit similar to McIntosh, but
lighter red skin color. "Highly resistant to browning.
Probably too tender for most Alberta regions" says Manchester.
Bears early, ripens October. "One of the best for drying" says BHB.
Ref Sheridan (1978), Smithfield. FB2-3 H3. (Syn Cortland Nova Red.)

Coutts #5 (Columbia X Boskill #2) Coutts
Never intended for release, but found its
way into the nursery trade. Art Coutts stated...
"It was a nice tree, wind resistant, but not hardy enough."
Ref J. Coutts. Also Harrison cat 1987.
Cowichan (op nled) Preston (1930)
FRUIT 4cm, red-purple. Primarily an ornamental rosbybloom, but also jelly.
Rostern test 1930s. Ref Smithfield, F.&N. H3 SC3.

Cox's Orange Pippin
Said to be grown successfully by Arthur Drews of Edmonton (1900). Ref CGS (Morden), Evans, F.&N. "Too tender" says Coutts.

Cranberry (Redflesh X Dolgo) R.L. Wodarz, Windmere ND (1953)
FRUIT dark red, flesh red. Oranmental and jelly. Ref CGS.

Crimson Beauty P.F. Sharp, Woodstock, NJ (c. 1880)
FRUIT of medium size, greenish, fair quality, early, drops easily and becomes mealy. Poor keeper. Manchester notes "Early summer apple of the colder regions of the United States and a red skinned substitute for Yellow Transparent, but not nearly as hardy." Used in the States as we use Heyer #12. "Sometimes erroneously called Early Red Bird," says F.P. Sharp of Woodstock, NB. FBI H3.

Crusoe (Wealthy sdig) CEF (c. 1903)
FRUIT 3cm, pale-yellow with red check, flesh yellowish, tender, juicy. Early bearing and good quality. H1.

Custer (Red Siberian X Wealthy) W.P. Baird, Mandan (1939)

Dakota (Wealthy X Whitney) Wm. Otto, Mandan (1966)
FRUIT 7cm, dessert. Ref F.&N. (Brooks and Olmo register say "Oitto") (Tested as Mandan 42-13.)

Dakota Beauty (nied. sdig) Hanson (1944)
FRUIT 2cm, dark red, flesh red and juicy. Jelly. Ref F.&N.

Dana Trio (baccata cerasifera X Mercer) Hansen (1938)
FRUIT 4cm, blackish-red over a yellow ground. Sauce and pickles. Ref F.&N.

Daniel's Red Duchess Wm. Bardwell, Excelsior (1925)
(Duchess of Oldenburg bud mutation)
Similar to the parent, but less vigorous. Tested at Brooks and Morden. Ref L&U. H3.
(Syn Bardwell Red Duchess, Stark's Red Duchess.)

Dart
Ref PSM.

Dartmouth New Hampshire (prior to 1883)
FRUIT 4cm, red.

Dauphin (op. nled.) Preston (c. 1938)
NOTE ALSO THE FOLLOWING.

Dauphin (op. baccata) Boughen
FRUIT up to 3.5cm. Earliest bearing. Prolific. "Eats like an apple." Manchester notes... "Blooms abundantly on new wood. Exceptionally good early pollinator. Seldom WA. and recovers quickly. No astringency. Keeps like Rescue. Excellent canning. Has fruited at Jarvie every year since 1943 (48 years)" Not to be confused with the Preston Rosbybloom of the same name.
Davey (McIntosh sdig) S.I. Davenport, Mass. 1928 (1950) ST
Fruit red with deep calyx and stem cavities, and prominent lenticels.

Dawn (prunifolia X Simbirs k #9) Saunders CR
NOTE ALSO THE FOLLOWING.

Dawn (Columbia X Melba) Patterson 1944 (1959) CR
Fruit 4.5cm, light crimson.
Very early to ripen -- early August.
Flesh yellowish, crisp but becomes soft.
Severe crotch injury some winters. Heavy yield.
Good canning. Erskine rec. Manchester notes...
"Probably worthy of more extensive planting."
Ref Smithfield, F&N. H1. (Syn Early Redbird.)

Dean (baccata X Wealthy) Saunders CR
No longer grown, but a parent of Wapella. H2.
(Syn? Dean W.J. Rutherford.)

Delaware (Delicious X Stayman Winesap) W.F.Hines (1948) ST
Fruit the size and color of Delicious. Tested at Morden 1948.

Delcon (Conrad X Delicious) Paul H. Shepard, Mo (1948) ST
Dwarf tree. Tested at Morden 1949.

Delicious Iowa (1895) ST
Well known yellow apple.
Ref CGS (Brooks and Morden), L&U. H3.

Delight ST
Fruit 6cm, yellow, striped red, elongated. Dessert. Ref CGS (Brooks). H2.
Not to be confused with Boughen's Delight.

Delite (see Boughen's Delight) ST

Diana ST
Ref CGS (Brooks).

Dolgo (baccata sdig.) Hansen 1897 (1917) CR
Fruit 3.5cm, purple-red with heavy blue bloom, elongated. (The name "dolgo"
in Russian means long.) Jelly. Not a good keeper.
Popular on the prairies. Also rootstock and ornamental.
Susceptible to chlorosis. Manchester notes...
"Exceptionally dependable pollinator, and now being used
as such almost throughout the United States, interplanted in
old orchards or grafted into tree tops. Also one of the most
beautiful and useful crabs ever developed." According to
Smithfield, an op robusta sdig. Ref Hansen bullet #309 (1937),
Smithfield. FBZ H2 SC1.

Donald ST
Ref WCMH. FB1.

Double Red Delicious (see Starking Delicious) ST

Dr Bill (Patten sdig) Lethbridge (1941) ST
Fruit 6cm, light ground color, almost covered with rosy red wash and stripes.
Fair dessert, good cooking. No good at Unity SK.
Ref F&N, L&U. FB1?

Drewery (or Drewry in U of A records) ST
Schwalter rec 1968.

Drumbo ST
Rosthern test 1930s. H3.
Duchess
Most common test 1930s. H3.
Duchess of Oldenburg (Russian origin) (Probably prior to 1700)
Fruit 8-9 cm, yellow, streaked and splashed bright red. Attractive.
Fair producer, good baking and keeping. Formerly a leading commercial apple in northern US and BC, and a standard against which new selections were evaluated. Ref PSM, WCSV 1955, L&U, FB2 H3 SC1. Often listed as Duchess, and with 78 other synonyms. See also Daniel's Red Duchess.
Duchwell
Ref CGS (Morden).
Dudley (Duchess seedling)
Fruit large, yellow with red striped blush. Sauce and baking. Scab resistant.
Ref CGS, Manchester.
Duinnoe Solovieff
Ref CGS (Morden).
Dula
Ref PSM.
Dulce (Langford Beauty seedling)
Ottawa (1911)
Fruit medium size, greenish yellow, washed crimson. Flesh tender, sweet, good quality. Ref L&U, WCSV, FB1.
Earl Saunders
CR
Long obsolete.
Earliham (Colorado Orange X Allen Choice) Ames, Iowa (1922)
Fruit greenish yellow.
Ref CGS (Morden), F&N.
Earling Johnson of Conrich (1949)
From the farm of Earling Lund, Airdrie, Alberta
Early Cortland (Cortland X Lod) Geneva?
Ref Manchester.
Early Culton
Ref CGS (Brooks). Possibly a typo for Early Cortland.
Early Delicious (see Beacon)
Early Golden (see Lod)
Early Harvest (Blushed Calville seedling) N. Pankiw, Dufrost, Man. (1939) See also the following.
Early Harvest (Sylvia X Melba) Patterson (1960 intro)
Fruit striped and blushed. Early. Ref Smithfield.
Early McIntosh (Yellow Transparent X McIntosh) Geneva (1923)
Early Minnesota
Fruit green, lightly flushed dull red, oily skin. Keeps till February.
Most common test 1930s. Ref WCSV 1949, B'lodge test 1948. FB2 H3.
Early Redbird (see Crimson Beauty)
Occasionally also a syn for Dawn.

Early Strawberry (unknown) USA prior to 1875 CR
Fruit 4.5cm, orange and red.

Early Yellow CR
Consistently heavy cropper.

Eating A
Tested at Morden 1949
Also Eating B, and Eating C.

Echo Orchard (1955) CR
Smithfield records Pankiw of Dufrost as the originator.

Eda (see South Dakota Eda)

Edgar (McIntosh X Forest) CEF sel. 1929 (not intro) ST
Fruit dull black-red.
Too slow to come into bearing.
Not productive. Ref CGS (Morden), Smithfield, F.N.

Edith Smith (McIntosh sdg) Leonard Smith, Lucky Lake SK ST
Fruit 7cm, yellow-green with Intro by Lakeshore Nurseries (1964)

Edmonton Early
112 St/107 Avenue
Similar to Spartan.
Not available commercially (1981).

Edina
Ref CGS (Morden).

Eileen (unknown) Wright CR
Fruit 3.5cm, red. Tends to overbear
and produce smaller fruit. Keeps until June(!)
if not allowed to desiccate. Value for breeding?
Named for Eileen Evans, a cousin of Wright. F83 H1.

Eleanor (seed from Russia) Zalizniak (1945?) ST

Eleyi (pumila var.) Before 1920 CR
Fruit 2.5cm, purple-red. Grown for its
purple-red fls rather than fruit, but
listed here for its use as a sturdy stembuilder.
Crotch angle about 80 degrees. Manchester notes...
"Heavy bearing, susceptible to scab." (Syn Eley Crab.)

Elk River syn for the native wild crabapple of Minnesota, possibly Malus ioensis. Selected near Elk River, Minnesota by Hansen (1930) and used as the female parent in much of his apple hybridizing work. Ref Maurer.

Elkhorn (Jewel X Gideon) Saunders (1913)
Fruit 5.5cm, crimson, stem long,
skin thin, quality fair. A back-cross

Elk #1 (McIntosh Red sdg) Henry Ell, Salvador, SK ST
Fruit 5cm, (larger under irrigation), red.
A slow growing tree, light yield. Dessert and cooking.
Intro by Lloyd (1939), who noted "rather sharp for dessert."
Obsolete says Coutts. Ref CGS. H2-3.
(Syn Elk's Seedless.)

Elk #3
FB2

Henry Ell, Salvador, SK
Elmer (Northern Spy seedling) CEF (1912) W.T. Macoun. 
Fruite like Northern Spy. Late. 
Ref CGS (Morden), Smithfield. 

Elsa (baccata X Yellow Transparent) Saunders 
Fruit nearly 4cm, bright yellow. 
Rostern test 1930s (H3). Hardy at Indian Head (1955). 
"Was a good crab in the 1930s" says Coutts 1991. H1. 

Elster (Golden Delicious X Ingrid Marie) 
(Syn Lustre Elstar.) 

Elta (Wealthy seedling) Hansen (1927) 
Fruit 6cm. sweet. The seed came from 
a Wealthy top worked on Hibernial. Ref F&N. 

Emperor Alexander (see Alexander) 

Empire Red (unknown) Roberta Campbell, Grande Forks, B.C. (1942) ST 
Fruit solid bright red, early. 

Enigma Fred Tarlton, Edmonton ST 
Fruit exceptionally sweet, good flavor. 
Obtained in error in place of Carroll. 

Erie (see Claire) 

Erickson (unknown) John & Charles Erickson, Aitkin, Minn. (1910) Intro 1923 ST 
Fruit large, yellow, washed bright red with heavy bluish bloom. 
Flesh coarse. Fair to good quality. Dessert, good cooking. 

Erl Trio (Fluke 10/baccata/Dolgo) Hansen (1938) CR 
Fruit 4cm. Bears well and keeps well. Ref F&N. 

Erling (unknown) Erling Lund, Acme, AB (1949) ? 
Ref L&U. 

Erste Piikio CR 
"Hardy and fruitful here," 
says Erskine. "Some visitors like it, but I don't." H1. 

Eshom Ref CGS (Brooks). 

Esther ST 
Fruit 7cm, red. Crisp, aromatic, good flavor. 

Eve (baccata X Siberisk #9) Saunders CR 
Hardy at Indian Head (1955). 

Excelsior (Wealthy X prunifolia) Hansen, Brookings Ref Hansen, bull #224 (1927), CGS (Brooks). ST 

Exeter (Columbia X Melba) Patterson (1959) ST 
Fruit 6cm, cream streaked with bright red. 
Late summer, very heavy yield. Fair quality for cooking and dessert, but doesn't keep. Erskine rec "A good breeder" says Coutts 1991. 

Extra Red Delicious (see Starking Delicious) 

Fairfield Ref CGS (Brooks). ST 

Fairfield's Ontario (Hyslop X Duchess) CEF Ref CGS (Brooks), Smithfield (as Fairfield). ST
Fall Red (Duchess X Haralson) Morden (1986) C.G. Davidson

Fameuse A 300 year old French selection
Fruit 7.5cm, deep red. Flesh white, juicy. Dessert only. Late mainseason. Doesn't keep. Manchester notes... "A venerable old Grandfather."
Bilozir Notes: A connoisseur's apple worldwide. Hardy enough at Calgary (at least 25 years success) when grafted onto hardy rootstock. Ref Prairie Moon, L&U, CGS. H3. (Syn Snow.)

Farnell #1 (unknown) John Farnell, Halkirk, AB
Fruit 7cm, greenish yellow with red blush. Good dessert apple of mellow flavor.

Fay Trio (Fluke 10 X Yellow Siberian) Hansen (1938)
Good for sauce. Ref CGS, F&M.

Fedun #5 (unknown) Fedun (seed from Poland)
Fruit 6cm. Very heavy cropper. Released by Lloyd (1940). Ref Lloyds Descriptive Price List No. 4 (1940-41).

Fedun #7 (unknown) Fedun (seed from Poland)
Fruit 6cm, highly colored, smooth skinned. Ripens September 25, and will keep to April says Lloyd. Released by Lloyd (1940). Note: Fedun selected and numbered some 12 selections.

Felt #1 Felt

Felt #2 Felt
"Worthy of trial" according to Hort Guides of the 1960's.

Fence (op Valdy) Bilozir (1992?)
Fruit 7cm, purple-red with exceptionally heavy bloom. Ripens mid-September. Juicy and sweet. Keeps till Christmas. Tree is readily distinguished by young twigs with black bark and white lenticels. Named for its location in the original garden planting.

Fenton (see Beacon)

Fillipa Ref CGS (Morden).

Fireside (McIntosh X Longfield) Excelsior (1943)
Fruit 7.5cm, dull red, sweet but rather tough and dry. Good keeping (Nov-April) and processing. Tested as Minn #993 (1927). Ref F&M. FB1-2 H3 SC1.

Fisher Northern test 1930s. Ref CGS (Brooks). H1.

Flame (unknown) Excelsior (c. 1920)
Fruit 2cm, bright red. Ref WCSH, Smithfield. FB1 H2 SC3. Tested as Minn. #635.

Garnet (op Yellow Siberian) Boughen (c1930)  CR
Fruit 4cm, flattened, red purple. Tart but good for canning and jelly. With Columbia and Osman judged best crabapple for SK (1955). Rarely as a commercial rootstock. Vigorous stembuilder. Very strong wide-angled crotches. Manchester notes...
"Grown at Jarvis since 1943 (48 years) and never XK. Fret hardy until late fall, and keeps well. Browns badly when cut. Excellent for juices. "Impossible to break limbs off the trunk... one man has 27 varieties on one Garnet at his back door," Boughen cat 1950. Ref F&W, L&U. FBI H1.

Garrison (Duchess X Starking Delicious) W.P. Baird, Mandan (1957)  ST
Fruit red with carmine stripes.
Dessert and culinary use. Formerly Mandan 49-S.

General Grant (origin USA before 1875) Ref PSM.

Geneva (nied sdlg) Preston (1930)  CR
Fruit 5cm, skin and outer flesh red.

George (McIntosh sdlg) Robert George, Edmonton, AB (1948) ST
Fruit 6cm, solid red.
Skin very waxy. Flesh coarse, greenish. Core large. Ref L&U.
(Except for waxy skin, very similar to Harcourt.)
Note: A spontaneous tree grew on a private Edmonton property where seed of McIntosh had been casually thrown out by Mr. and Mrs. Robert George. When Dr. R.E.(Bob) Hilton of the University of Alberta Plant Science Department saw this tree in fruit he made arrangements for the university to purchase it. (A sum in the vicinity of $1,000 was paid). Hilton considered that here was a shortcut to finding the superior apple for the prairies. It was named 'George' after the family who found it. A few years after the new accession was propagated and distributed to other testing stations across the prairies, word came back from the testing stations that that there were already better apples than George available and on trial. Ref P.D. McCalla.

Ref CGS (Brooks).

Goddard  
Ref CGS.

Godfrey ( Patten Greening sdlg) Morden (1931)  
Fruit 5.5cm, carmine red over pale green, waxy bloom. Good cooking,  
good keeping, fair dessert. Late. Named for  
Mr Wm Godfrey, head gardener at Morden Exp Farm.  
FBI-2 H2-3.

Golden (prunifolila X Golden Russet) Saunders (1911)  
Ref CGS (Brooks).
Golden Alberta (unknown)  Bilozir (1992?)  ST
Fruit 8-9cm, green, ripening yellow.
Long stem, russetting at stem end. Ripens mid-October,
and takes frost. Very acid, yet sweet. Will not brown.
Probably a Patten Greening sdlg. Described by the originator
as "the ugly apple, but of delicious flavor." FB1.

Golden Beauty (see Yellow Siberian)

Golden Delicious  ST
The popular commercial dessert apple.
Some scionwood fruited by E. Diakiew, Edmonton, 1970s.

Golden Granby
On test at Scott (1911).

Golden Lodi (see Lodi)

Golden Russet (antique)  ST
Fruit 6cm. Dessert, cooking, cider;
Commercially grown in colder regions of
eastern Canada, and may be worthy of trial

Golden Sweet (see Yellow Sweet)

Golden White  ST
Ref CS (Brooks).

Goldo (Grimes Golden sdlg.) Hansen (1922)  ST
Fruit "larger than Grimes Golden"
Makes a light yellow sauce of excellent
flavor. Ref CS (Brooks), Hansen bull #224. H3.

Goldparmaene  ST
Ref CS (Machinery). 

Goodhue (Malinda sdlg)  T.E. Perkins, Red Wing, Minn. (1901)  ST
Fruit 7cm, bright red.
Dessert and sauce. Tried at Kelfield, SK
early 1920s. No winter-kill until 1942-43.

Goodland (Patten Greening sdlg) Morden (selected 1925, named 1955)  ST
Fruit from 5 to over 8cm, creamy-green,
washed with red. Flesh cream-white, fine textured,
crisp, sweet. Good cooking. Late. Keeps about 2 months.
No resistance to chlorosis. "Not as hardy as Battleford,
but better in most other respects. Prob. worthy of more
widespread use, grafted into hardy frame trees" Manchester.
Evans notes... "Upright habit, self thinning, annual bearer,
excellent dessert flavor and texture; ready early Oct."
Also Erskine and Boyko rec. "A good apple. Tender. So far

Goodman  CR

Grand St. Jean  ST
Ref WESC. FB3.

Gravenstein  ST
Fruit 6cm, yellow with red flush streaks.
Cooking and dessert. Once widely grown in Nova Scotia,
and exported to England. [Starkes offered Gravenstein Triple Red
for "far north"] Manchester notes... "Not as hardy as most other
commercials, but a home garden favorite in most apple regions."
Great Eastern
Ref WCHS. FB3.

Great Northern
Ref WCHS. FB3.

Great West (unknown) Manchester (date?)
Fruit 8-9cm, green, becoming yellow, and ripening red in late August. Shape longer than Golden Delicious. Exceptionally juicy and good dessert. Trees vigorous with strong limbs, leaves large and clean. Discovered by Manchester as a mis-labelled or off-type among purchased nursery stock. Ref Manchester. H1.

Green Sweet (Russian origin)
Fruit medium size, greenish-yellow. Rosthern test 1930s. Prince George test 1948. Ref WCHS. FB1 H2. Note: another apple of the same name grown in eastern USA.

Greendale (McIntosh X Lodi) Geneva (1938)
Fruit 7-8 cm, green. Good dessert, ripens third week August. Stores 2 weeks at 31 F. Ref Manchester. H2.

Greening
Fruit 8cm? green, flesh dry but good. Cooking only. Ripens October and keeps till May. Ref BHB. H3.

Greenwood Prior to 1893
Ref PSM.

Gretna (Pioneer X Northern Spy) CEF Saunders
Fruit 9cm. Resembles Northern Spy in color, flesh and flavor. Late. Rosthern test 1930s, with poor results. H2.

Greves
Rosthern test 1930s. H3.

Grimes Golden
Ref CGS (Brooks). H1.

Grenenwood
Fruit 8cm, red with prominent white lenticels. Dessert. Being grown by Sunstar Nurseries (1990), and named for the person who supplied the budwood. Similar to (or possibly a synonym for) Haralred. H2.

Gypsy Girl (syn Titovka) Russian origin
Fruit very large, “splashed with red.” Ref L&W. FB3.

Haas (unknown) Gabriel Cerre, St. Louis, Mo. (c.1870)
Ref PSM.

Keeper. Ref CGS (Brooks and Morden), F&W. H1.

Hanson
Haralred Minnesota intro
Fruit over 6cm, glossy bright red with whitish flecks.
Similar to a large Norson. "A new and improved
version of Haralson. Fruit earlier, redder and sweeter."
Rec by Joe Broder of Lake Eden, AB in 1984, but not commercially
available at that time. H2.

Haralson (Malinda X Ben Davis) Seth Kenny, Morristown, Minn.
Fruit 6cm, brown-red. Intro. U of Minn (1923)
Russet badly some years.
Flesh firm, tough. Good for cooking, and dessert
after the New Year. Flavor improves with storage. Non-browning.
Exceptionally good keeper. Trees have a tendency to overproduce,
so fruit should be thinned to promote size. Has been used as a
rootstock, but inferior in this respect to Dolgo, Columbia and
Robusta 5. "Prob. best late (mid-Sept) standard apple that can
be grown here. Topwork in hard frame tree in protected location"

Harcourt (unknown) J.R. Algod, Gleichen AB
Fruit 6cm, blushed bright red.
Skin lightly waxed. Good quality dessert,
but not a good keeper. Vigor fair. (Similar to George.)
Selected from Wilson Orchards, Gleichen, AB. Formerly grown

Hardy Crab Saunders
Once used by prairie nurserymen
as a rootstock. However, subject to narrow
and missshapen crotches, and no longer grown.

Harlamowsky Piiklo
Tested at Morden (1949)

Harriman
CEF (1928) Preston
Ref CGS (Brooks), Smithfield.

Harvest Special (Columbia X Melba) Patterson (1960)
Fruit 5.2cm, but often produces lots of smaller apples.
Good quality but not a good keeper. Early. Erskine rec. Ref F&W.

Harvester (Sylvia X Melba) Patterson (1960)
Fruit 5.2cm, cream, blushed and striped.
Midseason. Dry and insipid taste. Doesn't keep. Ref F&W.

Hawkeye Greening (unknown) H.L. Lantz, Iowa Exp. Stn. (1921)
Good cooking and keeping.
Fair dessert. Ref F&W. FBZ.

Hazen (Duchess X Sparkling Delicious) Fargo, ND
Fruit 7cm, dark red. Flesh greenish, juicy, mild and nutty.
Early. Good dessert or cooking. Red Delicious type. Annual
cropping. Hardy W.Dakota. Ripens about Aug 25. Poor quality

Heart River (Dolgo X Duchess) W.P. Baird, Mandan, ND
Fruit red with yellowish flesh.
Chlorosis tolerant. Ref F&W, L&U.

Heaver (unknown) Heaver (1964)
Fruit 7cm, yellow with slight blush.
Dessert and keeper. Tested as Heaver #5.
Late. Ref Smithfield, F&W. H2.

Henry Clay
On Starkes "far north" list.
Ref CGS (Morden).
Herald (Fameuse sd1g)  CEF (1910) M.B. Davis
Ref WCRH, Smithfield, FBI.

Hermansky (Mcintosh sd1g)  Hermansky (1965)  ST
Fruit green, resembles Wagener in
shape and taste. Late. Fair keeper.
Intro by T. Martinovsky. Ref Skinners cat (1986), F&N. FBI.

Hermanson Isfeld  ST
Fruit crisp and juicy.

Heyer #2  ST
NOTE: A tree in Edmonton,
purchased as Heyer #2 about 1960, has frt as follows:
Fruit oblate, 8cm (much larger on newly fruiting trees)
yellow-green with light blush and red flecks one side.
Also densely fine green punctate. Light bloom. Stem short,
cavity russeted, basin shallow. Flesh crisp and juicy,
moderately sweet. Keeps until December. Good for sauce.
Heyer considered his #2 to be one of his two best originating.
(Syn Zychuck #17) Rostern test (1930s H2-3). H2.

Heyer #6 (unknown)  Heyer  CR
Fruit 5cm, uniform size. "Attractive
bright-red blush over most of surface.
Hard, fine-grained flesh. Keeps best of the Heyers."
says Manchester. Frt clusters around upright limbs.
Dessert, ripens early. Flavor not good. "Rich but slightly
astringent. Excellent flavor canned, but rather too large for
vaulting" says Manchester. Russian Seed via Ottawa.

Heyer #7 (unknown)  Heyer (c. 1936)  CR
Flavor very good, but
matures very late. Rostern test (1930s H2-3).
(Syn Mabel) Ref F&N. H2.

Heyer #12 (Russian apple sd1g.) Heyer (c. 1940)  ST
Fruit 6cm, green-yellow, very early.
Drops badly while ripening. Too tart for use as
dessert apple, but fine for cooking. Breaks down
quickly after ripening, so should be picked just before
fruit turns yellow. Heavy producer. Grows in dry areas.
Ref F&N, L&U, FBI H1.

Heyer #14 (unknown)  Heyer (c. 1936)  ST
SK hardiness trial. H1.

Heyer #18  Heyer  ?
Considered by Heyer as one
of his two best introductions.

Heyer #20 (unknown)  Heyer (c. 1936)  ST
Fruit 7cm, yellow with pink
cheek. Vigorous. Slightly later,
but a better keeper than Heyer #12.
"Has not proven hardy at Jarvis."
says Manchester.
Ref BMB. FB2 H2-3.

Hibernial (old Russian selection)
Fruit 8cm, green streaked with dark red.
Late. Fair cooking, but poor quality dessert.
Once used as a stembuilder, but 10% of branches
are subject to splitting.
Rostern test (1930s H3). "Too tender. No good as a breeder."
Hibeeke (Hibernals X Milwaukee periclinal chimera) Hansen (1916)
Fruit with the flesh and core
of Milwaukee, and the surface coloring of
Hibernals. A graft of split buds. Rostern test (as Hibcie, 1930s H3). Ref CGS (Brooks & Morden).
Nicks
Ref CGS (Brooks & Morden).

Tested at U of Manitoba
Ref WCSV 1949.

Honora (McIntosh sdig) CEF
Fruit lively red, midseason.
Ref Smithfield, WCSV. FB3 H3.

Honeygold (Golden Delicious X Haralson) Minnesota testing
Fruit 6cm, yellow. Golden Delicious type, but much harder,
and keeps until March. "Nearly indistinguishable from Golden
H2-3.

Hops (nied)
Hansen (1920)
Fruit 2.5-3cm. Bright garnet red,
turning yellowish bronze when ripe.
Purplish pink flesh ripening orange. Very tight core,
reddish seeds. Flavor acidy-bitter, not astringent.
Becoming mealy. Good for jelly, but best mixed with milder
flavored frt that lack color. Rich in pectin. Also ornamental.
Tried as a rootstock but plants lose vigor and the unions fail
at about the time of the first fruit crop. But Manchester notes...
"Good sturdy tree strong branced and with good vigor."
Ref F&M, L&U. FB1 H2 SC3.

Horace (Langford Beauty sdig) Ottawa selection (1912)
Fruit similar to Fameuse. Not introduced
Succeeded well at Morden.
Ref F&M, L&U. FB1.

Hume (McIntosh sdig) Ottawa (c. 1924)
Fruit of medium size,
well washed with dark crimson. Good quality. Early.
Ref Smithfield, CGS (Brooks & Morden), F&M, L&U.

Hur Viking
Ref CGS (Morden).

Hyslop (unknown) Prior to 1869
Fruit 4cm, yellow and red.
Astringent. Cooking. Keeps longer than most
crabapples, but usually ripens too late for Alberta.
Scott test (1911) Lacombe Nurs 1936. "Does fairly well

Maggie (Martha sdlg) Brandon (1904) CR
Tested at Scott. First fruit 1915.

Magnus (prunifolia X Simbirsik #9) Saunders (1911) CR
Fruit 3cm, orange-scarlet.
(From a 1904 cross)

Magrath
Apparently from the Magrath area of Alberta ST
Fruit large, green.

Malinda (unknown) Orig. before 1860, Orange county VT. ?
In the parentage of Kerr and many others
good cvs. Transmits quality, long keeping,

Malling 26
Dwarfing rootstock. Hardest of the Malling stock where
temperatures consistently cold. Ref Nikolai. "Tender" says Coutts.

Maluo
Ref CGS (Morden).
Manalta (unknown) Erskine (1972) ST
Fruit 6cm, nearly covered dark-red when ripe.
Sour, but good cooking, mellow to fair eating quality
by mid November. Keeps well.

Manan (Antonovka sdlg) Morden (1930) ST
Fruit medium large, greenish
yellow, washed and streaked deep red.
Dessert or canning. Late. Ref L&U.

Manbee (unknown chance sdlg) Morden (1938) ST
Fruit 6cm, red. Quality fair.
Vigorous and productive. Suffers water core. Ref L&U.

Manchester #1 (Columbia X Rescue) CR
Fruit 4-5cm. Hard fleshed. A little too small,
but very hardy. Late ripening, frost resistant, long keeping.

Manchester Steri-White (unknown) Manchester (1990) ?
Sterile white flowering rootstock.
Very vigorous upright growth, with strong branches
and large clean leaves. Ideal hardy frame tree, with never
any fruit setting. Discovered about 1975, and in 15 or more
years has never W&K or set fruit. Blooms every year to the
tips of new wood. Ref Manchester.

Manitoba (Duchess X Tolman Sweet) Morden (1931) ST
Fruit yellow amber with scarlet blush.
Fine grained melting white flesh with spicy flavor.
Good cooking. Late season. Vigorous tree. Ref Manchester. HI-2.

Manitoba Spy (Patten Greening sdlg) Morden (1931) ST
Fruit 8-9cm, dark green, streaked
dull red. Somewhat ribbed. Fair dessert,

Manred (Ansim sdlg) Morden (1930) CR
Fruit red with bloom. Thin skin.

Mantet (Tetofsky sdlg) Morden (1929) ST
Fruit to 6cm, washed and striped bright red.
Fruits in Peace country. W.T. Macoun visited Morden
as Dominion Horticulturist and exclaimed on tasting it... "Man!
there's a real apple." It was named Mantet without further trial.
Subject to sunscald. "A good apple but too tender," says Coutts

Manton (Antonovka sdlg) Morden (1929) ST
Fruit 8-9cm, greenish amber,
heavily washed carmine; russet at the stem cavity.
Not mellow until after the New Year, and keeps until summer.
Ref F&N L&U.

Margaret Pratt (unknown) C.A. Fleming (1938) Owen Sound, Ont. ST
Fruit dull red. Summer. Breaks down quickly. Ref CGS (Morden).

Margery (Pioneer X Northern Spy) CEF CR
Ref CGS (Morden), Smithfield.

Marilyn Heaver CR
Late season. CGS

Martha (baccata sdlg) Peter Gideon, Excelsior (1879) CR
Fruit 4cm, yellow-red.
Ornamental. Good commercial crabapple for
milder regions. Erskine rec for sheltered site. Ref PSM. H2.

Melbac Orchard Ref L&U.

Melon of Lepaa Pilkio. Morden tested (1949) CR

Melred (see Red Melba) ST

Melvin (Wealthy selg) CEF (1905) M.B. Davis
Fruit 7cm, light red. Good quality.
Ref L&U, Smithfield as intro 1910.

Mendel (Wealthy selg) CEF (1906) M.B. Davis
Fruit 7-8cm. Keeper. Ref L&U.

Mercer (spont. hybrid) Fluke (c.1892)
Fruit often over 6cm, yellow.
Acid. Used for jelly, or for adding a
quince-like flavor to apple sauce. Found growing
near Sherrard, Mercer County, Illinois. Ref CGS (Morden).

Merlin (Shiawassee selg) CEF (1921) M.B. Davis
Ref CGS (Brooks), Smithfield.

Miami (Anisim selg) Morden (1959)
Fruit 5-6cm, creamy green,
well washed with red. Slightly angular. Good dessert,
fair for cooking. Brows quickly on exposure to air. Late.
Morden #369. "No good at Unity" says Coutts. H2-3.

Michurin's Dessert Ref CGS (Morden).

Miller (see Beacon) CR

Milo (baccata hyb.) Hansen (1942)
Ref CGS (Morden).

Milowski Fred Milowski, Dauphin Man.
Fruit with white flesh.
Good cooker.

Milton (Yellow Transparent X McIntosh) Geneva (1923)
Fruit irregular in shape.
Texture rather too soft. Basic BC list. WCH. FB2 H2.
Manchester notes... "May be being grown in the Barrhead-Westlock-
Clyde region as Rob Roy (a sister cv)"
(Syn Milton McIntosh.)
Note: not to be confused with the apple of the same intro by
H.N. Scarf, Ohio (1935).

Miltosh (Milwaukee X McIntosh) CEF (1921) M.B. Davis
Ref WCH, Smithfield. H3.

Milwaukee (Duchess selg) Scott (test 1911)
Fruit 8cm, clear yellow washed with red stripes.
Early to midseason. Flesh tender and juicy but too
tart in the fall; improves with keeping. Keeps to February.
Cooking and cider. Annual bearer, and bears when young.
The best of the early Russian introductions.
Rostern test (1930s H3). Ref BHB, Manchester. FB2.

Minjon (Wealthy X Jonathan?) Excelsior (Minn #300)
Fruit solid bright red,
resembling Jonathan. Flesh pink
at maturity, coarse texture, flavor fair.

Minnehaha (Malinda selg) Excelsior (1920) Minn #300
Fruit 8cm, red. Dessert or cooking.
Season December to late winter. Ref CGS (Morden), F&N.
Minnesota origin Minnesota prior to 1872 CR

Otulson
Ref CGS (Brooks).

Ottawa (Swayzie sdlg) CEF (1921)
Fruit cream-yellow with crimson blush.
Late. Ref F&W, Smithfield.
Ottawa #3 (Robin X Malling 9)  CEF (1974) D.S.Blair & S.H.Nielson  ST
Fruit green-yellow with red.
20% dwarfing rootstock. Bilozir notes:
"The best dwarfing interstem."
BHB notes: Quite hardy, resistant to virus, but
"hard to propagate." Sawatzky (U of S) says definitely not
hard to propagate. Reaches 2.3m tall. Ref Smithfield.
At ATMHC, Edmonton, winter kills to ground but recovers, says
Thean Phee, and OK when used as an interstem.

Oxbo (Roxbury Russet sdlg)  Hansen (1922)  ST
Fruit 6cm.
Ref CGS (Brooks), F&W. Lacombe Nurseries (1940).

Palmer (joensis var palmeri)  \nFruit 3-4cm, green. Native to central N. Am.

Pankiw #9
Ref WCSH. Not tolerant to chlorosis.

Paperivka (seed from the Ukraine) Fedun (c. 1940)
"No good at Unity" says Coutts, 1991. FB3.

Park (Osman X Wealthy)  Patterson (1960)  ST
Fruit 6cm, bright red wash, conspicuous lenticels. Poor quality when
first picked, but later mellows and becomes acceptable.

Parken (baccata X Wealthy)  CEF (dale?)  ST
Ref CGS (Brooks & Morden).

Parkland (Rescue X Melba) Lacombe sel. Morden (1979) C.R Ure  ST
Fruit 6.5cm, or of variable size.
Green-yellow with 4% red on the sunny side.
Flesh creamy-white, tinged green.
Dessert, cooking. Keeps 6-8 weeks.
Early ripening (mid-Aug.) Falls quite badly.
Tends to produce annually. Overproductive.

Pate Melba (see Red Melba)

Pate's Red (see Red Melba)

Patricia (Mcintosh sdlg)  CEF (1920)  ST
Fruit dull red.
Flesh yellowish, with traces of red.
Good quality, highly perfumed, and attractive.
Early ripening. Short storage life. Biennial bearing.
Not to be confused with a 1953 Hoga sdlg from Des Moines.

Patten (sdlg of Duchess of Oldenburg)  Iowa  ?
Not to be confused with Patten Greening
Ref Maurer.

Patten Duchess  Tested at Scott (1911)  ST

Patten Greening (sdlg of Duch of Oldbg) C.G. Patten, Iowa, (1885)  ST
Fruit pale yellow-green.
Skin thin and tough. Good cooking, but
poor dessert. Good yield. Poor stembuilder
due to crotch weakness and willowy leader.
Ref PSM. H1-2.
Patterson (Columbia X Melba)  
Patterson (1960)  
Fruit up to 6cm, small some years.  
Blushed red over greenish-yellow (red almost  
lacking some years). Flesh pure white resists browning.  
Good dessert and keeper, juice, and drying. Very good cooking.  
Manchester notes... "wide crotches, well suited to espalier culture.  
Trees very sprawly, and long limbs must be pruned back  
or supported to prevent breakage. Annual pruning prevents setting  
of numerous small fruits." Falls when ripe. Erskine rec.  
Named for Dr C.F. Patterson, U of Sask. H1.  

Pattie (unknown)  
Boughen (1943)  
Fruit 5cm, green-yellow ("with bright red" says  
Smithfield.) Quite early ripening. Sweet and prolific.  
Hort Guides of early 1960s... worthy of trial.  
No tolerance to chlorosis. H1.  

Paul  
Georges Bugnet, Lac Majeau, AB Beaverlodge test 1946  
Peace Garden (Malinda X Duchess) W.P.Baird, Mandan (1957)  
Fruit glossy red, skin waxy.  
"Poor at Unity" says Coutts (1991).  
Ref F&M. Tested as Mandan 48-50.  

Peach of Montreal (Grown in Quebec province for many years)  
Fruit bruises badly. Ref WCSS. FB3.  

Pear Apple  
Ref CGS (Brooks). H3.  
Peeke (McIntosh sdlg)  
CEF (1911)  
Fruit 7cm, crimson. Hardier than McIntosh.  
Ref CGS (Morden), L&U.

PF 5 (Rescue X Melba)  
Scott  
"Did not grow at Parkland Farm U of A" says Beck (1990).  
(Also tested as M.O. #25 and Scott #25.) FB3.  

PF 20 (Heyer #12 X Melba)  
Brooks selection (1970)  
At Sprout Farm gathering, 1990.  
(Also tested as III-14-83.)
PF 51 (Haralson X Rescue)  Edmonton 1974  ST
Fruit 6-7cm, light green, streaked red on exposed surfaces. Round with very small, shallow lipped and russetted cavity. Basin small and shallow. Flesh greenish. Lenticels small but prominent at basin. Entire fruit may be russetted. Texture crisp. Skin a little tough. Juicy, sweet and aromatic. Good cooking, excellent dessert. Matures early to mid-Sept. Storage 3 months plus (fruits maintain firmness, but lose color and taste.) Pick when fully ripe. Strong frame, and exceptionally vigorous. FB2.

PF 52 (Rosilda X Rescue) syn PA 601  ST
Fruit 5-6cm, very attractive, slightly elongated. Good flavor, very crisp and juicy just before ripe, but losing crispness and turning mealy as soon as fully ripe. Fair keeper if picked early. "No good at Unity," says Coutts (1991).

PF 52-WB  W. Beck selection (c. 1985)  ST
Beck notes that one tree of PF 52 "attained a height of barely 5 or 6 feet during a quarter century. When grafted onto various rootstocks, the dwarfing characteristics were retained, regardless of the rootstock." In 1990 a plant of this dwarf was well established near the new office located at the south end of Parkland Farm.

Puritan (McIntosh X Red Astrachan) Massachusetts Ag Exp Stn (1953)  ST
Fruit of fairly good quality,  
but usually biennial bearing. Ref BC hardy list, F&N.

Pyramidal Siberian (baccata Pyramidalis)  CR
Best not planted due to firelight susceptibility.  
Manchester notes... “use Dolgo instead as tall pollinator.” FB3.
Quality (unknown)  Boughen (1937)  CR
Fruit 3cm, pale yellow  Tested by Morden (1949)
with red markings. Productive
Good canning and cooking. Erskine rec.
Ref BHB, F&M, L&W. H1-2.

Quinte (Crimson Beauty X Red Melba)  CEF (1964) L.P.S. Spangelo  ST
Fruit 7cm, yellow with bright red blush.
Good flavor and texture. Yield moderate and
rather biennial. Does not keep. "Fairly hardy for an
"Earliest good eating apple, holds up well during shipping...

Railway  Brooks  ST
A chance seedling found growing by
the railway line. Probably coming from a core thrown
out of a passenger train window. Used as a rootstock.
Ref BHB, CGS (Brooks).

Ranetka Purpurea  CR
In use as a rootstock.
(Used by Yried's Nursery 1988)
Supposedly harder than Antonovka, less hardy
than baccata, but with better rate of compatibility.
Bilozir notes: An excellent rootstock.
(Name usually abbreviated to "Renetka.")

Rebo (Blushed Calville sdg.) Boskill (intro by Lloyd before 1939)  ST
Fruit 6cm, dull yellow with slight patches of bright red.
Skin lenticels large, white numerous. Flesh yellowish-white, crisp,
juicy, sprightly to mild flavor. Good cooking, fair dessert,
prolific. Early to mid September, and keeps to Christmas.
Lloyd notes... Selected by Frank Boskill from the same block
of (Scott) sdigs as Rescue.
(Syn Boskill No. 12.) Note: Boskill numbered his selections
1 to 12. In 1939 Lloyd listed and offered Boskill numbers 3
through 8, as well as number 12 (Rebo). Ref J. Coutts.

Recover (Blushed Calville sdg) Scott (1936)  CR
Tested as Scott #2.

Red Anis  ST
Rostern test (1938 H3). Ref CGS (Brooks).

Red Astrachan  Sweden  ST
Fruiting early August, light crop.
Ref BC hardy list. Tobe's Treery (1944), L&W. H3.

Similar to Atlas, but fruit more

Red Baron (Golden Delicious X Daniels Red Duchess) Excelsior (1969)  ST
Fruit 6-7cm, smooth, attractive orange-red. Very late ripening,
but stands hard fall frosts. Probably needs to be stored like
Haralson to attain full quality. Developed for northern USA.
Surviving at Rocky Mountain House, AB. Erskine. Also grown by
J. Coutts since c1940. Ref BHB. FBI H2.

Red Cheek  ST
Ref PSM.

Red Cinnamon  Pfikfo
Tested at Morden, 1949. UA notes.

Long obsolete.
Ref CGS.
Red Dauphin
Fruit 2.5 cm, purple.

Red Duchess (sport of Duchess) Stockport, NY (1943)
Fruit 7-8 cm, almost solid red, dessert. (See also Daniel's Red Duchess) Ref WCHS, L&U. FB3 H1-2.

Red Ester
Delicious fruit, but not hardy.
Tested by Erskine, H3. (Syn Lawyer's Nutmeg.)

Red Flesh (see Redflesh)

Red Haralson
Ref Manchester.

Red Heaver (unknown) Heaver (1964)
Fruit 2.5 cm, purple
with red flesh. Primarily an ornamental, but fruit used for pickles.

Red June
Ref WCHS (1944). H1.

Red King
Ref CGS (Brooks).

Red Manchu (baccata selection)
Tested in North Dakota as a rootstock.
Good seedling survival rate.

Red Melba (Melba bud mutation) CEF (1940s)
Fruit similar to Melba,
but skin more red, flesh more firm and less subject
to bruising. Slightly later. "Good breeder" says Coutts.
Note: budwood was distributed to various growers as Melba,
and named by many of them as the mutation became evident.
Originated at Davidson Nursery, Fonthill, Ont.
Ref Smithfield, Morden test (1949), Sheridan Nurseries (1978),
L&U, WCHS. FB2 H3.

Red River (Dolgo X Delicious) A.F. Yeager, ND Exp Stn (1937)
Fruit to 5 cm, yellow and red.
Flavor flat. Tested at Indian Head

Red Rock (op) Orchard. Tested at Morden 1949
Ref Smithfield.

Red Siberian (robusta clone) prior to 1880
Fruit red, round. Rosthern test (1930s H1).
Skinner's cat (1938).

Red Spy
Geneva
Bud sport of Northern Spy, with which it is intersterile.
"Fruit described as solid bright red, otherwise like Northern Spy
in all respects" says J. Coutts. Ref CGS (Brooks).

Red Sweet
Rosthern test (1930s H2-3). Ref CGS (Brooks).

Fruit resembles a highly Selected 1923.
colored Wealthy. Keep on tree
to end of Sept. Will keep to Feb or March.
Tested as Minn #638. "Good breeder" says Coutts. Ref L & H1.

Redwin Spy (Northern Spy bud mut.) A.W. Pate, Brantwood, Ont. (1934) ST
FRT BRILLIANT RED.
Commercial apple, but not as popular as
Northern Spy for processing. Ref Smithfield. FAN.

Redwine (unknown) Boughen (1955) CR
Fruit small-medium, brilliant red.

Regent (Red Duchess X Delicious) Minn. ST
Fruit bright red over yellow.
Very juicy. Quality dessert with flavor
as good as or better than Delicious. Fruit hangs well.
Vigorous tree. H2.

Reid (unknown) Mrs F.E. MacDonald, Melfort, SK (1950's) CR
Fruit 5cm. Good flavor. Skinner intro

Renet Bergatney ST
Ref CGS (Brooks & Morden). H1.

Reneta (seed from the Ukraine) Fedun (1940) ST
Ref Smithfield as "Renata."

Renown (Repka Kislaga sdg) Indian Head (1936) CR
Fruit 4cm, yellow splashed
with red. A mild and sweet dessert.
"Reminiscent of Golden Delicious" says Sprout.
Good resistance to browning. Not not good for canning.
Productive. Rather late ripening. "Hard to beat for eating
fresh" says Manchester, "and best framed into a hardy tree."
Selected when orphans raiding the test orchard emptied their
pockets of other apples, and filled up with this one.
Ref L & FB2 H1-2. SEE ALSO THE FOLLOWING.

Renown One
Name coined by the present writer to differentiate between
this strain and the more common Renown crabapple. Bert DeGier of
Neerlandia notes (May 1991) that the "other Renown" is being
grown in the Vega area. Apparently it received an award of merit
in 1908.
Repka Kislag. (Russian origin)
Fruit of medium size, pale greenish
yellow, blushed pink. Thick skinned. Good dessert.
Rostern test (1930s H3). Ref PSM. (Syn Beautiful Arcade.)

Rescue (Blushed Calville sdlg) Scott (c.1933)
Fruit 3.5cm, yellow-green with
carmine red blush. Dessert, canning, and juice.
Slow to brown. Soon goes mealy. Productive, and keeps
quite well if picked when ripening. Manchester notes...
"Some tree-ripened fruits become translucent and very sweet.
Sure to give satisfaction with Heyer 12 or Dauphin as pollinator.
Worthy of planting everywhere." Named following the rescue of a
little scionwood after an orchard raid at Scott.
No tolerance to chlorosis. "Obsolete, but was a good one," says Coutts.
Tested as Scott #1. Ref F&N, L&U. FBI-2 H1.

Retlaw
Erik A. Fredling, Norquay, Sask. (1949)

Reward (Moscow Pear sdlg) Indian Head (1945)
Fruit 6cm, pale yellow with dull red.
Skinner's cat (1947)... "Good quality.

Ref Hansen, Maurer.

September Ruby (Rescue X Haralson B’lodge) (1986)  ST
Fruit 6.5cm, bright red with green ribbing.
Good dessert, juicing and keeping qualities. Early.
Formerly PF36. “A lovely looking apple” says Sprout.

Serada (Harry Kaump sdlg)  Hansen (1916)  ST
Resembles Yellow Transparent.
Early fruiting. Serada is Russian for “Wednesday”

Severn (Swayzie sdlg)  CEF (1908) M.B. Davies
Ref Smithfield. SEE ALSO THE FOLLOWING.

Severn (unknown)  Boughen (1930)  CR
Fruit 3.5cm, yellow, well washed with crimson.
Soft, and slightly astringent. Good for juice, and exceptionally good sauce, but too seedy for canning.
Good flavor. Heavy bearing at an early age. Very early ripening, and extremely productive. Frt easily damaged by early frosts.
They become translucent if left to overripen. Good for short season districts. Abundant pollen, and may also be self fruitful.
Ref Manchester, F&N. H1.

Shafer (Rescue X Trail) W. Shafer Poplar Point, MB  Morden (1963)  CR
Fruit 4.5cm, yellow, blushed with red. Flesh yellow. Sweet dessert.
Similar to Trail in size and quality, but slightly darker orange, and does not bruise as easily as Trail. H1-2.

Sharon  ST
Fruit medium sized, mostly red with dark red stripes. Excellent cooking, dessert or juicing. Midseason. Keeps through January.
Ref BHB. FB2 H2-3.
Shelley (Heyer #12 sdlg) Wright (1965) CR
FRUIT 3cm, longer than wide, dull red. Flesh red. Early. Ref F&N. FB1.

Shiawassee
Ref CGS (Morden).

Shirley (Olga sdlg) Robinson (1939) CR
FRUIT tight yellow with red stripes.
Summer season. Ref L&U, Smithfield -- as "Shirley Ann... resembles Robin." FB1.

Shoko (toenss X Alexander) Hansen (1922) CR
FRUIT nearly 5cm, green.
Good for sauce. Note: Shoko is the Sioux Indian word for "seven." (See also Choka)

Siberian Crab (common name for Malus baccata)

Silken Leaf
Ref PSM.

Silvia (see Sylvia)
ST
Silvia was the original and therefore official spelling, but by common practice the spelling is now "Sylvia."

Sim Gold Robert Simonet
OFFERED in 1990 by Ken Riske of Hill Creek Nursery, Edmonton, AB. Tested at ATN&HC (H2-3.)

Sim Red Robert Simonet
FRUIT 8-9cm, angled to give squarish shape.
Yellowish-green, streaked and washed red.
Flesh greenish. Sweet dessert. Ripens late September.
Offered in 1990 by Ken Riske of Hill Creek Nursery, Edmonton, AB. Tested at ATN&HC (H2.)

Simbirsk #1 (Russian origin)
Ref PSM. Rostern test (1930s H2-3). CR

Simbirsk #9
ST
A red-fleshed apple of this name grown by Zaychuk of Edmonton (c.1981)

Simonet Dwarf Robert Simonet
ST
A selection intended for dwarfing.
Tested at ATN&HC (H3.)

Slavish Winter
Ref CGS (Morden).

Slocan (mfed sdlg) CEF (1928) Preston

Ref Smithfield. H1.

Sorel (McMahan X Scott Winter) CEF (1908) M.B. Davis
Tested at Scott (1911). Ref Smithfield.

South Cross (op) Orchard.
Tested at Morden (1949). Ref LAU, Smithfield.

South Dakota Ben (Jonathan X Tony) Hansen (1938)
Fruit 5cm. Sauce. Ref F&N.

South Dakota Bona  Hansen (1940)
Fruit 3.5cm. very dark red.
Red sauce of good quality. Ref F&N.

South Dakota Eda (Jonathan X Tony) Hansen (1940)
Fruit 5cm. Similar to Jonathan.
Ref F&N.

South Dakota Maka (McIntosh X baccata) Hansen (1938)
Fruit 4cm., bright red.
Cooking. Ref CGS (Morden), F&N.

South Dakota Waldo (Fluke X Duchess) Hansen (1938)
Fruit 4cm., striped
red over yellow. Sauce.
Good yield. Ref CGS (Morden), F&N.

South Dakota Wendel (Charlamovsy X Missouri wild crab) Hansen (1938)
Fruit 4cm., red. Sauce.
Ref CGS (Morden).

South Dakota Winter (Red Vein X Elk river) Hansen (1942)
Fruit 4.5cm., tight red.
Makes good sauce even after freezing. Keeps well.

Spangelo (Crusoe selg)  Morden (1930)
Fruit 8cm., pale green with bright red blush.
Skin thin and tough. Flavor poor. Subject to sunscald.
Named for Albert Spangelo of the Morden staff.
Ref F&N, LAU. FB2 H1.

Spartan (McIntosh X Newton) R.C. Palmer, Summerland (1936)
Similar to McIntosh but later. A very good breeder, says Coutts.

Spilland (Northern Spy selg) CEF (1923) M.B. Davis
Rostern test -- as Spilland -- (1930s H3).
Ref CGS (Morden), Smithfield.

Fruit like Northern Spy. Late.
Ref CGS (Brooks) -- as Spiretta #26032, Smithfield.

Spitzenburg  Ref CGS.

Spiewell (Northern Spy selg) CEF (1927) W.T. Macoun
Fruit Carmine. Late.
Ref CGS (Brooks & Morden), Smithfield.

St. Lawrence (Fall St. Lawrence bud sport)
Fruit with deep red streaks. Midseason.
Ref CGS (Brooks), Smithfield.

Star  Maison  CR
Starking (see Starking Delicious)

Starking Delicious (Delicious bud mutation) Lewis Mood, NJ (1924) ST
Fruit red with darker stripes
Ref CGS (Morden), F&N.

State Fair (Mantet X Oriole) U of Minn. ST
Fruit 6-7cm, bright red. Flesh white.
Good flavor. Ripens August 18-24 and keeps 3 weeks.

Stayman Winesap (Winesap sdlg) Kansas ST
Ref CGS (Brooks), Starkes, Maurer.

Stephens (Wealthy sdlg) W.P. Baird, Mandan (1952) ST
Fruit resembles Wealthy.
Ref F&N, L&U.

Stevenson (Patten Greening sdlg) Morden (1931) ST
Fruit 8cm, green-yellow, striped dark red.
Productive. Good cooking, fair dessert. Late.
Keeps from December through March. Named for A.P. Stevenson,

Stonetosh (Stone X McIntosh) CEF (1922) ST
Fruit yellow with red blush.
Late. Cooking apple. Ref Smithfield, F&N.

Stor Torstefin
Ref UC Hardy list.

Stranger

Strathmore (Hopa sdlg) A. Griffin, Brooks (1937) CR
Fruit 2cm, skin purplish, Intro by W.R. Leslie, Morden
flesh red. Jelly and ornamental.

Strawberry Crab (see Early Strawberry)

Striped USA prior to 1875 CR
Keeping.
Beaveridge test 1944. Ref CGS (Brooks).

Sturdy (Florence sdlg) Robinson (1945) CR
FRUIT 3cm, dark red, flesh amber.
Fair quality, good yield.

Success Ohio Exp Stn (1929) CR
Fruit 3cm. Not recommended. H1.

Sue
Rostern test (1930s H2). Ref CGS (Brooks).

Sugar (Antonovka sdlg) Hansen (1919) CR
FRUIT 3.5-5cm, yellow with a bronze blush. Tough flesh. Ripens Sept 1.
Produces a sweet dark-yellow sauce. Skinner's cat (1938).
"Dessert flavor not good" says Erskine. Ref L&U. H1.

Sugar Miron Pilkio. Tested at Morden 1949.
Ref UA notes.

Sugar Sweet
Ref F&N.

Summer Champion
Ref Starkes Far north 1st (c1935).
Summerred (Summerland S 4-8 sdlg) Summerland, B.C. (1964)
Fruit 7.5cm, bright solid blush.
McIntosh type. Prominent lenticels. Good quality cooking
and dessert. Good yield. Ripens end of September
at Calgary (Nikolaï). Tree strong, upright.
"Fairly hardy and a good breeder" says Coultts.
Ref FB2. H2.

Sundog (baccata X nied) Morden (1947)
Fruit 2.5cm, more ornamental than edible.
Columnar rosy bloom. Ref L&U.

Sunnybrook (Heyer #12 X Morden 359) Brooks (1980)
Fruit from less than 4cm
to more than 6cm, round, yellow with red cheeks,
small core. Slightly acid, but sweet. Good for cooking.
Keeps 3 weeks. Manchester notes..."Very promising.
Must be frameworked into a hardy tree for success
in this region." Fruit size varies with climate and location. H2.

Superb
Ref CGS (Brooks). H1.

Susan (unknown) Dr A. McDonald, Silver Pk, SK
Intro by Skinner (1955)

Sweet Crab
Ref CGS.

Sweet McIntosh (Lawyer X McIntosh)
Fruit large, red-yellow. Sweet and aromatic.
Late. Keeps 150 days at 30 F. Does not resemble McIntosh.
Ref Manchester. H2.

Sweet Russet (a name of no standing, applied to several different cvs)

Sweet Sixteen (Minn. #477 (a.p. Malinda) X Northern Spy
Fruit 8cm, dark red, fully colored
by stripes and solid wash. Very sweet crisp,
juicy and aromatic. Dessert and cooking. Keeps well from
Sept. to December. Ref Apples for Minn. by Hoover and Munson.
(Tested as Minn. #1630.)

Sweetmac (McIntosh sdlg) CEF (1923) M.B. Davis
Ref CGS (Morden), Smithfield.

Sweetosh (McIntosh sdlg) CEF (1921) M.B. Davis
Ref CGS (Morden), Smithfield.

Sylvia (baccata X Yellow Transparent) Saunders, CEF (1911)
Fruit nearly 4cm, pale yellow.
Very early maturing. Subject to water core
soon after ripening. Blades..."a horrible dessert apple,
but a favorite canned." Manchester..."Exceptionally good
for sauce and juice, but not good for eating until fully ripe.
Dependably hardy at Jarvis. Fruit drops. The first favorite of
the coyotes and bears." Not tolerant to chlorosis. WCHS 1955 rec.
Note: the original spelling was "Silvia" q.v. Ref FB2. H1-2.

Talman (see Tolman Sweet)

Tank E.A.Tank, Neudorf, SK (1954)

Tartan (Dolgo sdlg) Robinson (1945)
Fruit 3.5cm, light green
with red mottling and striping. Jelly.
Tasty Wright (date?) CR
Good flavor.
Not to be confused with a Northrn Spy sdlg of the same name released by CEF in 1912.

Tetofsky Imported from Russia by the Massachusetts Hort Soc (1835) CR
Fruit greenish yellow.
Not as good as Yellow Transparent
Boughen cat (1950) says "quick bearer of red apples."
Also listed as Tetrofsky. Ref F & N, WSH, FB3 H2-3.

Theifera Rosea Hyland Barnes Nursery, Vancouver CR

Thorberg (Duchess X ?Starking Delicious) W.P.Baird, Mandan (1957) ST
Fruit red, carmine stripes
and tan dots. Cooking.
Tested as Mandan 51-38. Ref F & N.

Thoresen Boughen

Tipi (loensis X Duchess) Hansen (1922) CR
Ref CGS (Brooks & Morden). The Indian word for "tent."

Titova (see Gypsy Girl)

Toba (Rosilda X Angus) Morden (1937) CR
Fruit 4cm, red with heavy waxy bloom. Aromatic. Good for jelly or cooking.

Tolman Sweet
Fruit yellow-green, flesh soft, sweet.
Good for cooking. CGS (Brooks & Morden).
Ref BHB, Smithfield. (Syn Tallman Sweet.)

Tolsteme (bacata sdlg) Hansen (c.1942) CR
Ref CGS (Morden).

Tolton (unknown) Ewart Tolton of Otterburne, MB (1936) CR
Fruit yellow. Flesh white.
Juicy. Good fresh, and very good preserved.
Like Sylvia, but more erect habit.
Ref L & U. H1.

Tom Tapp
Ref CGS (Morden). CR

Tonka (Grown in the USA prior to 1893) CR
Ref PSM. H3.

Tony (bacata X McMahon) Saunders, Indian Head (1908) CR
Fruit nearly 4cm. Rostern test (1930s H2).

Toskkee (McIntosh X Milwaukee) CEF (1923) ST
Fruit pale yellow, blushed.
Midseason. Ref CGS (Brooks & Morden), Smithfield. H2.

Toshlaw (McIntosh X Lawyer) CEF (1925) ST
Fruit green-yellow with crimson blush.
Late. Ref CGS (Brooks), Smithfield, F & N.

Toshprince (Prince X McIntosh) Saunders back-cross. CEF (1923) CR
Fruit 4cm, red. Large core.
Jelly and pickles.
Ref F & N. H1.
Trail (Northern Queen X Rideau) Saunders 1905 cross. CEF (1923)
Fruit 4cm, orange-red.
Dessert and cooking, but not good for canning.
Yield and quality good, vigor fair. Bruises easily.

Trailman (Trail X Osman) Beaverlodge (1973)
Fruit 4cm, egg-shaped. Uniform golden,
Overlaid by distinctive reddish-brown wash on exposed side.
Flesh golden-yellow. Spicy tart flavor. Dessert or canning.

Transcendent (adstringens clone) Grown before 1844
Fruit 3-4cm, yellow-green,
usually with a red cheek.
Ref PSM, Hansen, Lacombe Nurs (1936), Maurer. FB3 H1.

Transcontinental
Ref CGS.

Transilda

Fruit bright dark red.
Rosthern test (as Wabaskaw) 1930s (H2-3).
Ref CGS (as Wabasha), Smithfield.

Wagener USA origin
Fruit shiny green, scarlet and russet dots.
Crisp and juicy. Dessert and keeper. Ref CGS. H2-3.

Wahoya (Nevis X Wolf River) Hansen (1938)
Fruit 5.5cm. Cooking and keeping.
Ref CGS (Morden), F & N.

Wakaga (Nevis X Wolf River) Hansen (1938)
Fruit 6cm. Sauce.
Ref CGS (Brooks & Morden), F & N.

Wakonda (Nevis X Northern Spy) Hansen (1931)
Jelly and preserves. Ref F & N.

Wakpala (Mercer X Tolman Sweet) Hansen (1928)
Fruit 5cm, yellow with red.
Spicy sweet fragrance.
Ref CGS (Morden), F & N. (Syn Wakapala.)

Waldo (see South Dakota Waldo)

Wallace (unknown) B.D. Wallace, Portage, MB (1936)
Fruit blushed. Early.
Good flavor. Ref CGS, F & N, Smithfield.

Wallace Whitney (see Whitney)

Walters Green E. Walters
Fruit 5.5cm.

Walton (McMahan X Scott Winter) CEF (1906)
Tested at Scott (1911). Ref Smithfield.

Wamdesa (ioensis X Jonathan) Hansen (1938)
Fruit 5cm, red. Keeps very well.
Ref CGS (Brooks & Morden), F & N.

Wapella (Dean X Ontario) CEF (1912)
Fruit 5cm, pale yellow blushed crimson. Late. Good quality and keeps till March.

Watopia (ioensis X Jonathan) Hansen (1939)
Fruit 7.5cm. Ref F & N.

Watson's Striped (see Striped)

Watts (Patten Greening sdig) Morden (1931)
Fruit 8-9cm, irregular, blushed red with short stripes. Stem long and slender.
Skin thick, flesh greenish-white, coarse grained.
Vigorous and productive, but fruit of fair to poor quality.
Named for Mr Harry Watts, former herdsman at Morden. Ref F & N, L&A.

Waubay (Grimes Golden X Mercer) Hansen (1933)
Fruit 3cm, red. Keeper.
Jellies and preserves. Also ornamental. Ref F & N.

Waukon (unknown) G.H. Sikes, Moorehead, Minn. (c.1920)
Wealthy type, but harder.

Waziya (Nevis X Northwestern Greening) Hansen (1938)
Fruit 5.5cm, green.
Poor cooking quality. Ref CGS (Morden), F & N.
Wealthy (op robusta)  Peter Gideon, Excelsior (c.1869)  ST
Fruit 8cm, cream yellow with scarlet flush. Crisp and juicy dessert and cooking.
Keeps to December. Small tree, and bears early and heavily.
Biennial bearing, so should be thinned. Not tolerant to chlorosis.

Wecota (Nevis X Northwest Greening)  Hansen (1929)  CR
Fruit up to 5cm, acid, oily skin.
Ref CGS (Brooks & Morden), F&N. H3.

Wedge (Ben Davis oldg) U of Minn. (1912)  ST
Fruit of good quality. Productive.
Ref CGS (Morden), F&N. Tested as Minn #207.

Wellington (Cortland X Crimson Beauty)  ST
Fruit large, redflushed.
Juicy with a tart flavor. Cooking and dessert.
Early. Needs a very early pollinator. Ref Manchester.

Wendell (see South Dakota Wendel)  CR

Wescota (see Wecota)  CR

Wesley  ST
Ref CGS (Morden).

Western Queen  Harrison (1953)  CR
Fruit up to 7.5cm, yellow with red stripes. Matures the first week in Sept.

Westland (Heyer #12 X Dr. Bill) Brooks (1980)  CR
Fruit 7.5cm, pale yellow green, washed and striped red. Good cooking. Keeps 6-8 weeks.
Boyko notes... "Too droopy and untidy, and not easy to prune."
But Evans notes..."Droops due to heavy bearing. Large fruit, annual crop, needs no thinning, snow white flesh doesn't brown, good texture. Ripens early September." Manchester notes..."Fruit hangs on and keeps better than Norland. Not as good eating, and probably not as hardy as Norland." Coultts notes..."A poor apple, a poor tree, and a poor breeder." Possibly triploid. Tested as PF 8.

White Astrachan  CR

Whitney (baccata oldg)  A.R. Whitney, Franklin Grove, Ill (prior to 1865)  CR
Fruit 5cm, yellow, red striped.
Once a very popular economic crabapple
(Syn Wallace Whitney: Whitney #20)
Short lived on prairies. Ref PSM, L&U. FB2-3 H3.
Wild Siberian (syn for Malus baccata)
Williams
Bill William, Dauphin MB
Will's Anniversary
Ref CGS.
Winesap
Commercial apple.
Dessert and good keeping. H3.
Winnifred (Blushed Calville sdlg) A.P. Stevenson, Morden
Ref Smithfield. H2.
Winter Banana U.S.A. origin (prior to 1929)
Fruit 8-10cm, attractive yellow with scarlet flush.
Waxy skin, flesh yellow. Dessert. Distinctive tantalizing aromatic flavor, but not like bananas. Worth crossing with our most hardy cvs. The very large fruits are excellent keepers, and once eaten never forgotten. Grown in the 1920s around Spokane. Very good climatic adaptability. (needing a short period of winter chill). One of the very few cvs that can be fruited in warmer regions of California. Ref Manchester. H3.
Winter Crab
Ref CGS (Morden).
Winter Queen (Osman X Wealthy) Patterson (1960)
Fruit 8cm, dull red blush.
Good quality. Normally too late, ripening well into October, but standing some frost. Ref F&N. H2.
Winter Redflesh (Saskia X Redflesh)
Fruit redfleshed, good for jelly and sauce.
Prolific. Late. A rosbybloom with abundant purple flowers and dark leaves. Ref Manchester.
Winter St. Lawrence (see St. Lawrence)
Winton (Mcintosh sdlg)
CEF (1915) M.B. Davis
Ref CGS (Brooks). H2.
Wiyuta (Nevis X Wolf River) Hansen (1939)
Fruit 6cm. Ref CGS (Brooks & Morden).
Wolf River (Alexander sdlg.)
Fruit 10cm, yellow with slight blush. Flesh white.
"Not much of an eating apple, but a perennial favorite in pies. Ripens October. "Sole virtue is its incredible size." (ref BHB.) Keeps at least 2 months, Ref Prairie Moon, CGS (Morden). H2-3.
Wotanda (Nevis X Northwest Greening) Hansen (1939)
Fruit yellowish green.
Keeps well. Ref F&N.
Wright (op) Orchard. Tested at Morden 1949
Note: this crabapple apparently differs from the apple of the same name.
Wrixparent (Yellow Transparent bud mutation) Wrixhem McIlvaine.
Earlier and larger than parent. Delware (1940) ST
Ref F&N (as Wrixparent).
Yellow Beauty (Columbus X Wealthy) Patterson (1960)
Fruit to 5cm, yellow.
Evaluation varies, but yield is good. H1.
Yellow Delicious (see Golden Delicious)
Yellow Newton (see Newton)
REF CGS.

Yellow Siberian (baccata selection) Hansen (1938) CR
Formerly used as a seed source for rootstocks, promoting upright vigorous growth of scionwood. F&N H1.

Yellow Sweet (Russian origin) Hansen (1924) CR
FRUIT 5cm, yellow, sweet.
Re-named. Similar to Yellow Transparent.
At UA yield had to be estimated for three years (1938-40) as the fruit was eaten before records could be taken. Rostern test 1930s (H3).
(Syn Yellow Sweeting, Golden Sweet, Northern Sweet) Ref FB3 H2?

Yellow Transparent (Russian origin) USDA intro (1870) ST
FRUIT pale yellow, early, lacking flavor.
Best used before fully ripe, as flesh is soft and tends to bruise. Cooking. Earlier than Lodi, but does not keep more than two weeks. Subject to sunscald. Manchester notes...
(Syn Transparent, White Transparent)

Yield
Ref. T.H. Mock, Nurseryman, Winnipeg, MB

Zapata (foensis X Bismark) Hansen (1922) CR
FRUIT to 5cm, green.
Acid but good for sauce. Zapata is the Siouk word for "five." Ref CGS (Morden), F&N.

Zaychuk #1 ST
"Superb" says Evans.

Zaza (M. baccata X [Dch of Oldbg]) Hansen (1933) CR
FRUIT 2.5cm, red. Flesh red.
Ref F&N, Hansen bull #309.
Note: An unnamed red-fleshed apple on the property of Mrs. Yolande van Warkam in Edmonton is very likely of this cross, says Beck (1990). The tree is at least 20 years old. New owners of property have no historical background of the tree. Flowers remembered as red/pink. A single fruit sample and leaves received at DBG October 25th 1990. This is said to represent the average fruit size, at 5.5cm diameter, stalk short, 1.5cm. Skin color dark red with a slight bloom and a few light dots. Russet at the deep cavity, and shallow basin. Flesh a strong rosy red, mealy and deteriorating by October 25th, but still of dessert quality. Ref Vick.

Zeleba (Russian origin) Hansen (1922) ST
FRUIT to 8.5cm, red. Keeper.
Ref CGS (Brooks) F&N. FB3.

Zephorus Chernogous (see Chenango Strawberry)

Zirka (Seed from Ukraine) Fedun (1940) ST

Zita (nied) Hansen (1923) CR
FRUIT 3.5cm, red. Flesh red.
Ref F&N.

9-22-End Brooks ST
FRUIT 5.5cm? yellow with reddish blush.
Dessert. Not introduced, but offered in the trade (Sprout) in 1990. Ripens end of August, and will keep in storage 15 weeks. (Plot 9, end of row 22.)
